INTERNATIONAL MARITIME ORGANIZATION

E

WORKING GROUP ON THE EVALUATION OFTHE HAZARD OF HARMFUL SUBSTANCES CARRIED BY SHIPS
47th session
Agenda item 9

EHS 47/9
30 July 2010
Original: ENGLISH

REPORT OF THE FORTY-SEVENTH SESSION

1 INTRODUCTION

1.1 The forty-seventh session of the GESAMP/EHS Working Group on the Evaluation of the Hazards of Harmful Substances Carried by Ships was held at IMO Headquarters, London, from 26 to 30 July 2010 under the chairmanship of Dr. C.T. Bowmer. This meeting had been rescheduled from its intended date of 19 – 23 April 2010 in view of the widespread air traffic travel restrictions in force at this time which had prevented members from reaching the United Kingdom. The list of members attending the forty-seventh session is shown in annex 1 and the approved agenda is shown in annex 2.

Matters arising from IMO

1.2 The Group noted that the following meetings had taken place since the last session of the GESAMP/EHS Working Group:

.1 the fifteenth intersessional meeting of the Working Group on the Evaluation of Safety and Pollution Hazards of Chemicals (ESPH 15) met from 26 to 31 October 2009;

.2 the Evaluation of Safety and Pollution Hazards (ESPH) Working Group also met from 9 to 11 February 2010 during BLG 14;

.3 the Sub-Committee on Bulk Liquids and Gases held its fourteenth session from 8 to 12 February 2010;

.4 the Marine Environment Protection Committee met for its fifty-ninth session from 13 to 17 July 2009; and

.5 the Marine Environment Protection Committee had also met for its sixtieth session from 22 to 26 March 2010.

Matters discussed at these meetings which are of relevance to the work of GESAMP/EHS are summarized in annex 3.

Actions arising

1.3 From these issues, the proposed amendments in relation to EHS substance names for "Alkanes (C10-C26), linear and branched" and "Dialkyl thiophosphates, sodium salts solution" were accepted by the Group. The Group also noted the conclusion to treat Shale Oil products as MARPOL Annex I cargoes.

1.4 With respect to the request to reiterate the rationale behind the assignment of C3 ratings when applied to aqueous solutions of inorganic salts, the Group advised that the estimation of C3 ratings based on Oral/Dermal toxicity, Skin/Eye irritation/corrosion properties and any relevant information regarding aerosols/mists was intended to provide an advisory rating, allowing appropriate safety margins, for cases where acute inhalation toxicity was not available for various reasons. As such, it was intended to relate to both vapour and aerosol hazards. For further information "The Revised GESAMP Hazard Evaluation Procedure for Chemical Substances Carried by Ships, GESAMP Reports and Studies No. 64" should be consulted as referenced below:
http://www.gesamp.org/data/gesamp/files/media/Publications/Reports_and_studies_64/gallery_1363/object_1400_large.pdf

1.5 On the issue of the evaluation of petroleum oils, the Group noted that a considerable body of data for diesel and gasoline had now been made available for review by CONCAWE. Generic profiles for these materials were considered accordingly, as recorded in section 2 of the report.

1.6 The Group additionally noted the need to advance its ongoing review work on ballast water treatment system by-products and further progress on this issue is reported under section 4.

Activities of GESAMP

1.7 The Group received a report from Dr. Bowmer (as Chairman of GESAMP) on a number of recent activities and initiatives which had been undertaken by GESAMP. The key points addressed are summarized in annex 4.

2 EVALUATION OF NEW PRODUCTS

2.1 The Group considered the following new substances which had been submitted for evaluation by industry:

.1 Alkyl(C_{18}-C_{28})toluenesulphonic acid, calcium salt, borated
.2 Copolymer of acrylic acid and dimethyldiallylammonium chloride, partial sodium salt
.3 Alkyltoluenesulfonic acid (in mineral oil)
.4 Formic acid mixture (containing propionic acid 0 - 18% and Sodium formate)
.5 Alkyltoluenesulfonic acid, calcium salts, low overbase
.6 Maleic anhydride – sodium allylsulfonate copolymer
.7 2,2',2"-(Hexahydro-1,3,5-triazine-1,3,5-triyl)triethanol
.8 Allylsulfonic acid/maleic acid copolymer, containing carboxylate phosphonate and sulphonate groups, partial sodium salt solution
.9 Oxatetra-azahydroxyalkanoic acid, substituted with acetic acid / acetoxyethanolamine
.10 Sodium methylate solution 21-30% in methanol
.11 *tert*-Amyl ethyl ether
.12 Dibutyl terephthalate
.13 Acrylic acid/ethenesulfonic acid copolymer, containing carboxylate, phosphonate and sulfonate groups, sodium salts
.14 2-Propene-1-aminium, *N,N*-dimethyl-*N*-2-propenyl, chloride, homopolymer
.15 L-Aspartic acid, homopolymer, sodium salt
.16 Alkylbenzenes mixture (containing less than 1% naphthalene)
.17 Alkylbenzenes mixture (containing naphthalene)
.18 Crude alkylnaphthalenes (containing less than 1% naphthalene)
.19 Crude alkylnaphthalenes (containing naphthalene)

2.2 The resultant hazard profiles for these products are set out in annex 5.

2.3 In considering the various products, the Group made the following observations and comments:

.1 **Alkyl(C_{18}-C_{28})toluenesulphonic acid, calcium salts, borated** – the Group noted that as this material was supplied as a mixture with mineral oil, the latter component should be referenced in the Composite List entry. It was proposed that the product should be further qualified in terms of concentration and that the term (up to 70% in mineral oil) should be added to the name accordingly;

.2 **Copolymer of acrylic acid and dimethyldiallylammonium chloride, partial sodium salt** – the Group noted that two submissions for this polymer had been made representing different molecular weight values of around 1500 and 2000-4000 Daltons. In comparing the supporting data, it was concluded that a single entry to cover the two products was appropriate, and that the substance name should be qualified to reflect this. Accordingly, the Group proposed that the entry to be used for the Composite List should be "Acrylic acid/Dimethyldiallyl ammonium chloride copolymer, partial sodium salt (MWt. 1500-4000, aqueous solution)". No additional qualification with respect to concentration was considered necessary for this product;

.3 **Alkyltoluenesulfonic acid (in mineral oil)** – the Group decided that a qualification on alkyl chain length (C18-C28) was needed and that the concentration of the product should be stated and proposed therefore an entry for the Composite List of "Alky(C18-C28)toluenesulfonic acid (>90% in mineral oil)";

.4 **Formic acid mixture (containing propionic acid 0 – 18% and Sodium formate)** – the Group noted favourably the very comprehensive data set provided to support this material which had facilitated the clear assignment of the hazard profile. It was decided to modify the product name to qualify the sodium formate content and the entry for the Composite List was accordingly assigned as "Formic acid mixture (containing up to 18% propionic acid and up to 25% sodium formate)";

.5 **Alkyltoluenesulfonic acid, calcium salts, low overbase** – the Group decided that a qualification on alkyl chain length (C18-C28) was needed and that as this material was supplied as a mixture with mineral oil, the latter component should be referenced in the Composite List entry. It was proposed that the product should be further qualified in terms of concentration and that the name assigned should accordingly be "Alky(C18-C28) toluenesulfonic acid, calcium salts, low overbase (up to 60% in mineral oil)";

.6 **Maleic anhydride – sodium allylsulfonate copolymer** – the Group proposed that as a qualification to the product name, the term (aqueous solution) should be added. No qualification with respect to concentration was considered necessary for this product. The Group agreed that for column D1, a rating of (0) could be assigned based on observations noted in the dermal toxicity studies;

.7 **2,2',2"-(Hexahydro-1,3,5-triazine-1,3,5-triyl) triethanol** – the Group agreed that the name "Ethanoltriazine (aqueous solution)" should be used for this product in the Composite List;

.8 **Allylsulfonic acid/maleic acid copolymer, containing carboxylate, phosphonate and sulphonate groups, partial sodium salt solution** – the Group decided that the name for this product should be modified to "Maleic acid/allylsulfonic acid copolymer with phosphonate groups, partial sodium salt (aqueous solution)". No qualification with respect to concentration was considered necessary for this product;

.9 **Oxatetra-azahydroxyalkanoic acid, substituted with acetic acid/ acetoxyethanolamine** – no special comments were noted;

.10 **Sodium methylate solution 21-30% in methanol** – the Group noted that an important consideration with this material was that it rapidly hydrolyzes in water yielding methanol and sodium hydroxide. Accordingly, many properties needed to be considered based on data provided for the resultant hydrolysis products. With respect to the product name, the Group agreed to amend this to "Sodium methylate (21-30% in methanol)";

.11 ***tert*-Amyl ethyl ether** – no special comments were noted;

.12 **Dibutyl terephthalate** – no special comments were noted;

.13 **Acrylic acid/ethenesulfonic acid copolymer, containing carboxylate, phosphonate and sulfonate groups, sodium salts** – the Group decided that the name for this product should be modified to "Acrylic acid/ethenesulfonic acid copolymer with phosphonate groups, sodium salt (aqueous solution)". No qualification with respect to concentration was considered necessary for this product;

.14 **2-Propene-1-aminium, *N,N*-dimethyl-*N*-2-propenyl, chloride, homopolymer** – the Group proposed that as a qualification to the product name, the term (aqueous solution) should be added. No qualification with respect to concentration was considered necessary for this product;

.15 **L-Aspartic acid, homopolymer, sodium salt** – the Group proposed that as a qualification to the product name, the term (aqueous solution) should be added. No qualification with respect to concentration was considered necessary for this product;

.16 **Alkylbenzenes mixture (containing less than 1% naphthalene)** – no special comments were noted;

.17 **Alkylbenzenes mixture (containing naphthalene)** – no special comments were noted;

.18 **Crude alkylnaphthalenes (containing less than 1% naphthalene)** – the Group proposed that a more appropriate way of representing this substance in the Composite List would be to add the qualifier "crude" after the chemical name; and

.19 **Crude alkylnaphthalenes (containing naphthalene)** – the Group proposed that a more appropriate way of representing this substance in the Composite List would be to add the qualifier "crude" after the chemical name.

2.4 The Group were advised that a further new substance "Methylal (≥ 85%)" had been submitted for consideration at this session but that, as the evaluation fee for this material had not yet been received by IMO, this would be held over for review until the next meeting.

Cleaning additive components

2.5 In addition to the substances presented above, the Group noted that two products used as components in cleaning additive formulations had been submitted for evaluation. In accordance with MEPC.1/Circ.590 (Revised tank cleaning additives guidance note and reporting form), a shortened hazard profile only had been requested for each of these two components. This allows Pollution Category to be determined but only requires ratings to be established for columns **A1 (bioaccumulation), A2 (biodegration), B1 (acute aquatic toxicity) and D3 (long-term health effects)**.

2.6 As noted previously, it was stressed, that even if only a partial GESAMP profile is required, it is nevertheless imperative that full supporting data are provided for the properties to be reviewed. In this context, the Group again reiterated their general advice with respect to the submission of data for components of cleaning additives. This specifies the key elements, which need to be addressed when completing the GESAMP form, as listed below:

Sections 1-4	-	all relevant information;
Section 5	-	molecular weight and water solubility;
Section 7	-	sensitization and any long-term health effects; and
Section 8	-	acute toxicity data; bioaccumulation data; and biodegradation data.

Further guidance on presenting these data are given in the GESAMP Reports and Studies No.64 publication (The Revised GESAMP Hazard Evaluation Procedure for Chemical Substances carried by Ships) and this report may be found on the GESAMP website as referenced below:
http://www.gesamp.org/data/gesamp/files/media/Publications/Reports_and_studies_64/gallery_1363/object_1400_large.pdf
To support all data submissions, the Group further reiterated that summaries with full reference details or complete study reports should always be provided.

2.7 In considering the two cleaning additive components, the Group made the following observations and comments:

.1 **Pentasodium triphosphate** – the Group noted that a comprehensive supporting data package for this material was available as a HERA dataset and this was fully utilized for the assignment of the hazard profile ratings. In this context, the material was evaluated based on its behaviour as an aqueous solution.

.2 **Fatty alcohol EO sulphate Na C12-C14 2EO** – the group noted that, as for the previous product, a comprehensive supporting package for this material was available as a HERA dataset. In line with the format utilized for other alcohol ethoxylates in the Composite List, it was proposed that a more appropriate name to use for this component would be "Alcohol (C12-C14) poly(2)ethoxylate sulphate, sodium salt".

2.8 The resultant hazard profiles for these products are set out in annex 5. As agreed previously, cleaning additive components with partial hazard profiles will now be identified as such in the Composite List in order to highlight that such profiles may only be used for the evaluation of cleaning additives and not for mixture calculations in relation to bulk shipments.

Review of diesel/gasoline

2.9 The Group noted that it had been requested by BLG/ESPH to undertake the development of generic hazard profiles for diesel and gasoline (petrol) in order to facilitate further work on the carriage of bio-fuel blends. This may support, for example, mixture calculations in relation to bio-fuel/petroleum oil blends should future tripartite agreements need to be established for particular products. In this context, it was also noted that whilst it was intended for these products to be featured as List 5 entries in the MEPC.2/Circular (defining substances not shipped in pure form under MARPOL Annex II but only as components in mixtures), in view of any safety concerns, full GESAMP Hazard profiles nevertheless still needed to be developed.

2.10 The Group recalled that when evaluating pyrolysis gasoline and coal tar creosote in the past, a successful outcome had been achieved by adopting an approach which used a weighted average for each profile rating based on compositional data for a wide range of representative samples. In the present instance, such information had not been forthcoming but alternatively, a full body of data for a range of diesel and gasoline products had been made available by CONCAWE in order to prepare for the meeting.

2.11 The CONCAWE dataset together with information from the EPA (HPV dossier for Gas Oils Category) and IARC was fully reviewed and generic GESAMP Hazard Profiles as set out below were assigned accordingly. The CONCAWE reports used to prepare the hazard profiles were: Report 95/107, Gas oils (diesel fuels/heating oils); 92/103, Gasolines; 01/54, Environmental classification of petroleum substances – summary data and rationale; and 06/05, Classification and labelling of petroleum substances according to the EU dangerous substances directive (CONCAWE recommendations – July 2005). For further information see the publications section on *www.concawe.be*.

Gasoline/Petrol

A1a	A1b	A1	A2	B1	B2	C1	C2	C3	D1	D2	D3	E1	E2	E3
4	4	4	NR	3	NI	0	0	(1)	2	1	ATCM		E	3

Diesel (automotive)

A1a	A1b	A1	A2	B1	B2	C1	C2	C3	D1	D2	D3	E1	E2	E3
4	NI	4	NR	3	NI	0	0	2	2	0	A		F	2

2.12 In assigning these ratings, the Group noted the following points and reservations:

Gasoline/Petrol

.1 Gasoline contains well over 100 separate products from six main refinery streams: crude distillation (naphtha); alkylation, isomerization and solvent refining; cracking (hydrogenation, catalytic, thermal and steam); catalytic reforming; hydrotreating and oxygenates (MTBE, TAME etc). Gasoline consists of n- and iso-alkanes (30-90%), cycloalkanes (1-30%),

aromatics (5-55%) and alkenes (0-20%), all with carbon numbers in the C4 to C12 range. Lighter napththas such as (C3-C6) used as feedstock, e.g., for chemical manufacture, are not included in the current evaluation;

Bioaccumulation (LogKow and BCF)

.2 CONCAWE 92/103 summarized a wide range of bioconcentration data. A median carbon number of C8 was chosen with which to select "marker substances" whose associated data would best reflect the typical properties of gasolines, so avoiding a worst-case approach. The table given in annex 6 lists the logKow and BCF data given by CONCAWE 92/103 for these marker substances. Given the predominance of n-, iso- and cyclo-alkanes in many gasolines, the most appropriate rating for both the logPow (Column A1a) and the BCF (Column A1b) was concluded to be a 4;

Biodegradation

.3 With no ready biodegradability data being available for whole samples of gasolines, the ratings for common gasoline components were assessed from existing hazard profiles.

Substances	**Rating in the GESAMP composite list**
Octane, Octene, Nonane, alkyl C3-C4 benzenes	R
Trimethylbenzene, Octene, all isomers, Naphthalene	NR

Given that very similar components can be either readily biodegradable or not depending on the test conditions, bioavailability and other factors, it can be concluded that gasolines will degrade relatively rapidly in the environment but that they are not readily biodegradable as a whole;

Aquatic toxicity

.4 A wide variety of ecotoxicity tests summarized by CONCAWE 92/103 are available with a predominant rating of 3; this applies equally to fish, crustaceans and microalgae. Some test data indicate a rating of 2 or of 4 but these data are in the minority and the weight of evidence supports a rating of 3;

Physical effects on wildlife and benthic habitats

.5 The composition of gasoline varies considerably depending on the crude oil used and refinery characteristics. It contains volatile components which will evaporate rapidly. The E2 rating of E is based on this behaviour. Gasolines also contain a substantial percentage of less volatile components which will evaporate more slowly and remain on the water surface for a longer period of time. This is supported by information from CONCAWE which states that "Following spillage, the more volatile components of gasoline will be rapidly lost, with concurrent dissolution of these and other constituents into the water. Under laboratory conditions, gasoline evaporated to 50% of its initial weight in 2 hours and to 20% in 6-8 hours. Within 24 hours, the monoaromatic fraction had almost completely evaporated, with <5% of initial concentrations remaining.";

Diesel (automotive)

.6 Diesel (gas oil) is marketed as automotive fuel, heating oil and marine fuels. Gas oils contain straight and branched chain alkanes (paraffins), cycloalkanes (naphthenes), aromatic hydrocarbons and mixed aromatic cycloalkanes. Olefins are also present in cracked gas oils. Diesels have carbon numbers from C9 to C25 and most are from C11 to C25;

Bioaccumulation (LogKow and BCF)

.7 CONCAWE 95/107 gives the logKow range of various diesel products as 3.9 to >6.0 but the majority of the composition will be far greater than this. No measured bioconcentration data are available. As the lower molecular weight components are in the bioaccumulatable range, a nominal rating of 4 in column 1a was assigned;

Biodegradation

.8 CONCAWE 95/107 considered that the components of diesel are not readily biodegradable;

Aquatic toxicity

.9 A wide variety of ecotoxicity tests summarized by CONCAWE 95/107 are available with a predominant rating of 3; this applies equally to fish, crustaceans and microalgae. Some test data indicates a rating of 2 or of 4 but these data are in the minority and the weight of evidence supports a rating of 3;

Human health effects

.10 In assigning the rating for column D3, only data in relation to automotive type diesel have been considered. It is recognized that with heavy fuel oils carcinogenicity properties can be present but such products have not been addressed in the current assignment exercise; and

Physical effects on wildlife and benthic habitats

.11 With respect to the assignment of an F rating for column E2, it was similarly stressed that only data in relation to automotive type diesel have been considered. It was noted that with heavy fuel oils, this would become an Fp rating but such products have not been included in this evaluation.

3 CORRESPONDENCE WITH THE INDUSTRY AND CONSIDERATION OF QUERIES RELATED TO EVALUATIONS

Industry Correspondence

3.1 The Group noted that additional information on the following two products had been received with a request that this be taken into account for the evaluation of these substances. The results of this exercise are set out at annex 7.

Alkyltoluenesulfonic acid, calcium salts

3.2 Further information on this material had been received clarifying its composition and providing additional data. After carefully reviewing this new input and comparing aquatic environmental data with that supplied for Alkyltoluenesulfonic acid, calcium salts, low overbase, the Group agreed to revise ratings in the GESAMP Hazard Profile as follows:

A1a	amended to	(0)
A1b	amended to	(4)
A1	amended to	(4)
A2	amended to	(NR)
B1	amended to	(0)
C3	amended to	(0)
D1	amended to	0
D2	amended to	0
E3	amended to	2

3.3 Additionally, as requested by the manufacturer, it was agreed to qualify the name of the product by adding the term "high overbase" to signify that a modified processing route has been employed (further carbonation step utilizing additional calcium hydroxide) in comparison to the "low overbase" material. The Group also decided that, for consistency with the low overbase material, alkyl chain length range for the product should be qualified by incorporating the term (C18-C28) and that a reference to its concentration limit (up to 70%) in mineral oil should be added.

3.4 Industry argued that low overbase (LOB) and high overbase (HOB) products show a different skin sensitization potential. Whereas LOB-products are skin sensitizers in animals and humans, the HOB-products showed no sensitization in human patch tests.

3.5 The Group accordingly evaluated the chemical composition of the products concerned and the toxicity testing data received. For Alkyltoluenesulfonic acid, calcium salt, low overbase, animal experiments as well as human patch tests show strong skin sensitization potential. However, with free calcium added, the high overbase product shows a lower sensitization potential in animals and the human study showed no effects. The Group referred to the classification rules of the Globally Harmonized System (GHS), which state that positive effects, whether shown in humans or animals, should justify classification. Positive results from well-conducted animal studies are not necessarily overruled by human experience and according to chapter 3.4 of the GHS, positive data from either animal studies or studies in man should lead to classification.

3.6 According to these rules, both LOB and HOB products have been shown to be skin sensitizers in appropriate animal tests. The absence of effects in the human study on HOB could either be artificial as the study could have lacked sensitivity or skin redness could have been prevented by a calcium overload in the cells even though an immunological reaction took place. The results obtained in the animal experiments which are good quality studies would not be similarly affected. The Group concluded therefore that the alkyltoluenesulfonic acid, calcium salts irrespective of whether or not the carbonation step with added calcium hydroxide has been employed, should be classified as skin sensitizers based on the positive tests presented.

Polyolefin amide alkylene amine polyol

3.7 Further information on the chemical structure of this product and related materials had been received. After full consideration of the new input, the Group concluded that the material did not have sensitization properties and the D3 rating in the GESAMP Hazard profile was

amended accordingly. In reassessing the data and new information now available, amendments were also made for column A1b giving a rating of 2 which then resulted in a 2 rating overall for A1.

Miscellaneous amendments

3.8 In response to the request made by the ESPH Working Group in relation to EHS substance names for "Alkanes (C10-C26), linear and branched" and "Dialkyl thiophosphates, sodium salts solution" (see paragraph 1.3), amendments were made to these entries as reflected in the updated Composite List as presented in annex 7.

4 BALLAST WATER TREATMENT BY-PRODUCTS

4.1 At the last meeting, at the request of IMO on behalf of the GESAMP Ballast Water Working Group (BWWG), key environmental, human health and physical-chemical properties were reviewed for eighteen substances which are of interest to the Group in the context of their evaluation of ballast water treatment systems. The materials concerned are listed in annex 8.

4.2 Information was requested on a range of phys-chem characteristics and on the properties listed below:

Acute aquatic toxicity	Acute mammalian toxicity
Chronic aquatic toxicity	Corrosion/irritation
Sediment toxicity	Sensitization
Endocrine disruption	Repeated-Dose toxicity
Bioaccumulation	Development and Reproductive toxicity
Modes of degradation	Carcinogenicity/Mutagenicity

4.3 This information is needed in order to assist the BWWG with their risk assessment work on common by-products generated by various oxidizing treatment systems and a number of evaluations were undertaken accordingly. In some instances, GESAMP/EHS hazard profiles had previously been assigned and, where available, these were then used as a basis from which to develop the profiles and extended data sets required.

4.4 The Group continued with their review work and finalized the data sets for all products based on information available. For the ecotoxicity assessments, it was noted that insufficient data were available for dichloroacetic acid and trichloroacetic acid.

4.5 The finalized reviews will be provided to the BWWG for their consideration and usage in the assessment of ballast water treatment systems. It was proposed that the full data sets could be made available on the main GESAMP website by BWWG in order to provide convenient access for future reference/retrieval. GESAMP/EHS hazard profile ratings meanwhile had been assigned as a guide to these substances (although more information was available in the full data sets) and these are summarized in annex 9.

5 CONSOLIDATION OF DATA

Miscellaneous amendments

5.1 During an ongoing review of the GESAMP/EHS files which had been undertaken by the Secretariat, some issues with specific ratings in hazard profiles (compared to information contained in the files) had been observed for a number of substances. These observations were presented to the Group for their consideration and eight substances had ratings checked with two products requiring correction to be made to their hazard profiles as indicated below.

The changes implemented have been incorporated into the updated GESAMP/EHS Composite List as presented in annex 7.

1,5,9-Cyclododecatriene (EHS 534)	:	C3=1, D2=1
Decahydronapthalene (EHS 551)	:	C3=2, D1=2

Although a number of further questions on other substances remain to be checked, these products could not be addressed at this session due to time constraints. Accordingly, these issues will be carried forward to the next meeting as part of the ongoing exercise to consolidate data records and hazard ratings.

6 COMMUNICATION AND PUBLICATION

6.1 The Group recalled that at its forty-sixth meeting it had agreed to focus publications activity on promoting the methodology developed for the estimation of inhalation toxicity in the context of bulk maritime transport. An initial text had been developed which included details of a comprehensive validation study undertaken in support of this approach and this had been reviewed by the Group. It was agreed that further work on the draft setting into context the need and the resultant benefits associated with this work was required.

6.2 The Group noted that considerable further development of the text had now been undertaken and this was presented to the Group for review. It was recognized that some additional work was still needed in order now to finalize the paper for publication but it was agreed that this would be undertaken over the next few months so as to be able to complete this activity by the year end.

6.3 In addition to this initiative, the Group also reviewed the need for updating and re-issuing GESAMP Reports and Studies No. 64 (The Revised GESAMP Hazard Evaluation Procedure for Chemical Substances Carried by Ships). The Group was informed that stocks of this report had run out but that there was ongoing interest in this document. The group recalled that the revised procedure was prepared between 1995 and 1998 at the same time as the Globally Harmonized System and that whilst it was not the intention to change the basis of the hazard profile or the procedure, some additional guidance and interpretation would be beneficial in dealing with certain aspects of the GHS.

6.4 The group agreed therefore to prepare a second edition of Reports & Studies No.64, incorporating the following strictly editorial updates and improvements:

.1 incorporation of the addenda into R&S No. 64 as a whole;

.2 inclusion of the rationale on the estimation of inhalation toxicity under the text for column C3;

.3 the provision of additional guidance on the interpretation of the long-term toxicity criteria under Column D3, in particular for; carcinogenicity (C), target organ systemic toxicity (T) as well as sensitization (S), including respiratory sensitization (in the light of recent requests from industry for clarification on this point);

.4 consolidation of the text and Annex VI on Column E2 (floaters & sinkers), including a review of the examples used; and

.5 an update of Annex IV on suitable biodegradation tests in the light of recent developments and publications.

6.5 The group agreed to detail the scope of the proposed amendments for EHS 48 in 2011 and to prepare a final draft for consideration and endorsement in 2012 prior to requesting approval from GESAMP for the revised version to be issued.

7 ANY OTHER BUSINESS

Membership issues

7.1 The Group welcomed Dr. Wenxin Jiang of the Tianjin Research Institute of Water Transport Engineering (China), to the meeting as an additional expert to support the ecotoxicity resource within the team. This initiative was noted to be in line with the general GESAMP objective to involve scientific experts from around the world in the activities of GESAMP and its working groups. Support to facilitate this had been made available courtesy of the Swedish International Development Co-operation Agency (SIDA) and this was gratefully acknowledged by the Working Group members.

7.2 The Group noted that as yet, it had not been possible to identify a suitable successor for Professor Syversen and that efforts would be intensified to recruit a senior toxicologist in order to sustain the expertise levels in this area. In this context, the Group agreed that further opportunities to involve experts from developing countries in the activities of GESAMP/EHS should continue to be explored.

Funding arrangements

7.3 The Group recalled that charges had now been introduced for the evaluation of new substances in line with the earlier decision taken by MEPC. The mechanism employed treats the evaluation of products to be carried in bulk, products used as a component in a bulk mixture and components used in cleaning additives in an identical manner and is based on a fixed fee/user pays principle. As part of these arrangements, it had been agreed that the fixed fee must be paid each time an evaluation is carried out on a product since this provides a clear incentive to provide the complete range of data necessary for the Working Group to carry out an evaluation in one session. It was noted, however, that the application of further fees was not intended to apply in cases where some follow-up action was needed on a specific issue in order just to clarify study methodology details or question particular test results.

7.4 In the current session, twenty-one product submissions had been processed at the fixed fee rate of US$6,500. A further product had also been put forward for consideration but this substance was withdrawn and held over for review until the next meeting, pending the settlement of its evaluation charges.

7.5 The Group were advised that, in accordance with MEPC/BLG guidance, the income available will continue to be used to support and maintain expertise at EHS Working Group meetings in line with the objectives as outlined above.

7.6 It was noted by the Chairman that, as the EHS Working Group also requires a degree of support from the main GESAMP body, some level of financial contribution in this context should be provided to the parent body. The issue of funding for GESAMP in general is currently being explored and options are being developed for discussion within IMO.

Globally Harmonized System of Classification and Labelling of Chemicals (GHS) issues

7.7 The Group were advised that in line with the policy decision taken by GESAMP to promote the awareness and usage of GESAMP Hazard profiles, a contribution to a survey on existing international classification lists of chemicals which utilized GHS principles had been

made. A questionnaire issued by the Sub-Committee of Experts on the Globally Harmonized System of Classification and Labelling of Chemicals had been completed by the GESAMP Chairman and submitted by the Secretariat for consolidation in this exercise. A document summarizing all inputs received so far has been issued on the United Nations Economic Commission for Europe (UNECE) website under the reference UN/SCEGHS/19/INF.4 – see link below for details. (http://www.un.ece.org/trans/doc/2010/ac10c4/UN-SCEGHS-19-INF04.pdf) Further inputs to the survey are still being collected and the full set of information will be reviewed later in the year at the next meeting of the GHS Sub-Committee.

7.8 In the context of the GHS guidance, the Group also debated whether the classification employed by GESAMP/EHS for defining the characteristics of floating substances should be brought to the attention of the GHS Sub-Committee. This was considered to be important as this approach was now embodied in many national and European regulations and accordingly, the Group decided that an information document to this effect should be put forward to the next GHS meeting for consideration.

8 FUTURE WORK PROGRAMME AND DATE OF THE NEXT SESSION

8.1 The Group agreed to a draft work programme for its next session which is set out in annex 10.

8.2 The Group agreed that the next regular meeting would be tentatively held from 11 to 15 April 2011.

8.3 **Submissions for this session should reach the *Technical Secretary of the GESAMP/EHS Working Group not later than Friday, 4 March 2011.**

9 CONSIDERATION AND ADOPTION OF THE REPORT

9.1 The Group adopted the report and, having thanked members for the considerable amount of effort, including extensive preparatory work, *inter alia,* the collection, collation and evaluation of data to generate Hazard Profiles, the Chairman closed the session on Friday, 30 July 2010 at 12.30 hrs.

ANNEX 2

AGENDA FOR THE FORTY-SEVENTH SESSION OF THE GESAMP/EHS WORKING GROUP

1 Adoption of the agenda

- Matters arising from IMO and other Organizations relevant to the activities of the Working Group

2 Evaluation of new substances

- New Substances
- Cleaning Additive components
- Diesel/gasoline

3 Correspondence with industry/consideration of issues related to evaluations

- Industry correspondence

4 Ballast Water Treatment by-products

5 Consolidation of data:

- Miscellaneous amendments

6 Communication and publication

- Acute inhalation toxicity review
- Update of GESAMP Reports and Studies No. 64
- Promotion of GESAMP Hazard Profiles

7 Any other business

- Membership issues
- Review of funding arrangements
- GHS survey
- Classification of floating substances

8 Future work programme and date of the following session

9 Consideration and adoption of the report

***

ANNEX 3

MATTERS ARISING FROM IMO

1.1 At the fifteenth intersessional meeting of the Working Group on the Evaluation of Safety and Pollution Hazards of Chemicals, the ESPH Group had:

.1 noted that when reviewing Alkanes (C10-C26), linear and branched, (representing Renewable Diesel), there had been a need to amend the substance name slightly from that adopted for GESAMP/EHS in order to accommodate different regulatory definitions used for the supply of this product in Europe and the United States. This required its alkyl chain length range being extended at the lower limit from C12 down to C10 but this was accepted by the Group since in the typical compositional data provided to GESAMP/EHS, small levels of C9-C11 had been indicated. The Group agreed that GESAMP/EHS should note this change to the product name and should be requested to amend the composite list to reflect the amendment accordingly;

.2 requested that GESAMP/EHS should note that for Dialkyl thiophosphates sodium salts solution, reference is made to a trade name (AERO 7249 Promoter) in the GESAMP/EHS Composite List and proposed that consideration should be given to removing this reference;

.3 noted that when reviewing Cesium formate solution, a number of principles had come up for debate related to difficulties which would be experienced for offshore support vessels when shipping inorganic solutions if C3 (inhalation toxicity) ratings as assigned in GESAMP Hazard Profiles are utilized in line with normal procedures. This would necessitate controlled tank venting arrangements to be in place but for operational reasons, on most offshore support vessels this is not a practical condition to impose. The Group concluded that the requirements for controlled venting or gauging or operational requirements in relation to the inhalation toxicity rating were not required in this case and carriage requirements for the product were assigned accordingly. This was based on the following criteria:

.1 the substance itself has low volatility and high stability under ambient temperature and pressure conditions;

.2 the solution does not produce toxic vapours; and

.3 there is a minimal risk of generating aerosols during transfer operations.

Reflecting on the arguments presented for inorganic brines in general, the Group agreed to ask GESAMP/EHS to consider the context of the rationale behind the assignment of the C3 rating for aqueous solutions of substances with low volatility and high stability which do not produce an aerosol or mist when carried under normal conditions of transport and to advise the Group accordingly;

.4 been advised that industry intended to request a review of the Reprotoxicity rating for sodium bromide solution and would submit further data to the next meeting of GESAMP/EHS accordingly (note, no information was received for EHS 47);

.5 recalled that the Marine Environment Protection Committee, at its fifty-sixth session, had agreed that cleaning additives in annex 10 of the MEPC.2/Circular, identified as being evaluated only through the old standard of MEPC/Circ.363 will

cease to be valid from 1 August 2010. To maintain products in annex 10, a re-evaluation of the cleaning additives concerned following the guidelines of MEPC.1/Circ.590 was necessary as emphasized and reflected in circular BLG.1/Circ.24 (Re-submission of data for cleaning additives for re-evaluation under the revised MARPOL Annex II);

.6 noted that when reviewing a number of List 3 Trade-named mixtures, for some products (effectively petroleum product cuts and blends), it may be preferable to treat them as List 1 substances following an evaluation of the product by GESAMP/EHS. This was recognized as an option open to industry when considering such mixtures;

.7 noted during its review process, that Iso-and cyclo-alkanes (C12+) had an incomplete GESAMP Hazard Profile although the product is included as an IBC Code chapter 17 entry. To reconcile this anomaly, industry and/or Administrations were invited to supply the missing data to GESAMP/EHS in order to be able to finalize the profile (note, no information was received for EHS 47);

.8 considered the report and the outcome of the previous session of the GESAMP/EHS Working Group;

.9 noted from the report that amendments to 28 hazard profiles had been introduced. These changes were analysed corresponding to whether or not there are consequential effects in terms of the carriage requirements assigned to these products. In undertaking this exercise, it was observed that in a number of cases, further revisions to assigned carriage requirements were required in order for them to be fully compatible with their complete GESAMP Hazard Profiles. This was principally due to a need to consider various safety ratings in the hazard profiles of the products concerned. To resolve this issue it was proposed that a systematic review of chapters 17 and 18 of the IBC Code was required; and

.10 discussed options for the carriage of bio-fuel/petroleum oil blends and had reiterated the need to proceed with the development hazard profiles for gasoline and diesel in order to facilitate further considerations.

1.2 The ESPH Working Group also met during BLG 14 and during this session, the ESPH Group had:

.1 debated a proposal on Shale oil, noting some questions on some of the ratings assigned in the GESAMP Hazard Profile (GHP) and an intention from industry to submit further data for consideration, but had concluded that Shale oil should be shipped under MARPOL Annex I in accordance with its treatment as an oil product in other reports issued by the United Nations. In this event, it was decided that no further consideration of this product would be pursued;

.2 reviewed a proposal to modify carriage requirements relating to C3 ratings for Fatty Acid Methyl Ester (FAME) products, but the Group had emphasized that if any new data in relation to the inherent toxicity of these products was available from industry, this should be submitted to the GESAMP/EHS group for evaluation. This might include making a proposal for an individual methyl ester product if supporting data specific to the material concerned were available;

.3 again stressed the need for GESAMP Hazard Profiles for gasoline and diesel to continue to be developed and assigned by GESAMP/EHS in order to aid any future assessment work which may be required for new bio-fuel blends;

.4 agreed a final listing of amendments for chapter 19 of the IBC Code and had proposed that these changes should be included when the next set of revisions to the IBC Code are made;

.5 noted that, with respect to a review of chapters 17 and 18 of the IBC Code, an initial overview to check that the evaluation of all products is carried out in a consistent manner would be beneficial; and

.6 had agreed that it would be useful to consolidate and circulate the various interpretations used by the Group when translating GESAMP Hazard Profile ratings into carriage requirements in order to assist with the process of evaluating of new products.

1.3 In BLG 14, the Sub-Committee approved the reports of the ESPH Working Group and:

.1 endorsed the proposals made by the Group and concurred with actions taken;

.2 proposed to invite MSC 87 and MEPC 61 to approve the holding of an intersessional meeting of the ESPH Working Group in 2011; and

.3 reviewed comments from the GHS Sub-Committee in relation to differences noted for the MSDS specifications for MARPOL Annex I Cargoes and Marine Fuel Oils and those of the standard GHS format.

1.4 The Marine Environment Protection Committee (MEPC) had held its fifty-ninth session and during this meeting, MEPC had:

.1 approved the report of BLG 13 in general;

.2 approved the holding of an intersession meeting of the ESPH Working Group in 2010; and

.3 noted that out of a list of more than 70 by-products, which have been detected during treatment by various ballast water management systems, the GESAMP Ballast Water Working Group had selected, as a first step, 18 chemicals believed to pose a potential risk to the environment as well as to human beings. GESAMP WG 1 (the GESAMP/EHS Group) had been asked to develop hazard profiles for these chemicals and the Committee noted further that, once developed, these hazard profiles could then be used both by applicants and the GESAMP-BWWG to significantly facilitate the review process and consequently increase the number of evaluations undertaken per meeting,

1.5 The Marine Environment Protection Committee had also held its sixtieth session and during this meeting, had:

.1 endorsed the intersessional meeting of the ESPH Working Group to be held from 18 to 22 October, 2010; and

.2 noted the further progress made on the establishment of a database for chemical by-products generated during ballast water treatment.

***

ANNEX 4

REVIEW OF GESAMP ACTIVITIES

1 **Introduction:** The Joint Group of Experts on the Scientific Aspects of Marine Environmental Protection (GESAMP) held its thirty-seventh session hosted by the UNEP Co-ordinating Body on the Seas of East Asia (COBSEA) in Bangkok, Thailand, from 15 to 19 February 2010.

2 **Evaluation of the hazards of harmful substances carried by ships (WG 1):** This Working Group evaluates, at the request of IMO, the hazards to the environment and human health of bulk liquid chemicals carried by ships. Initiated in 1971, the GESAMP hazard evaluation procedure was revised in 1998 and by 2007 all 800 hazard profiles had been revised according to the GHS compatible hazard evaluation procedure (GESAMP Reports & Studies No. 64, 2002). The hazard profile contains a unique fingerprint of each substance, providing information on 14 separate, human health, environmental and physico-chemical, hazard criteria. GESAMP considered that the hazard profiles could be applied in a wider context than bulk maritime transport and agreed that the "GESAMP Composite List" should be prominently placed on the GESAMP website, together with additional guidance which is to be developed on their use outside of their normal context.

3 **Review of applications for "active substances" to be used in ballast water management systems (WG 34):** WG 34 met on three occasions in the intersessional period to evaluate the risks for the environment, the crew, and the public at large as well as the ships' safety of 13 proposed ballast water management systems. It also held a second "Stock-taking" Workshop to discuss its evaluation methodology. GESAMP agreed to make the findings of each session available on the GESAMP website after the IMO Marine Environment Protection Committee has endorsed them. GESAMP recommended the convening of a third "Stock-taking" Workshop to complete the risk assessment methodology in full and to establish a "watching brief" on the potential impact on the marine environment of ballast water management technologies applied on ships in the future, in particular, if substantial quantities of chlorinated ballast water are discharged in coastal waters.

4 **Metals Working Group (WG 37):** GESAMP welcomed two proposals by UNEP resulting in the re-direction of the activities of WG 37 as follows: A GESAMP Task Team was established under WG 37 to fill the identified scientific data and information gaps on anthropogenic sources, releases and possible control measures for ***mercury****, in order to* assist UNEP with the preparation of a binding International agreement by 2013 to protect the environment from releases of mercury and its compounds. A second GESAMP Task Team under WG 37 was established to close listed scientific information gaps on ***lead and cadmium*** for integration, by August 2010, into UNEP's publication "Reviews of scientific information on lead and cadmium" and to inform its discussions on the need for global action in relation to these metals.

5 **Atmospheric input of chemicals to the ocean (WG 38):** In recognition of the growing interest concerning the impact of the atmospheric input of both natural and anthropogenic substances on ocean chemistry, biology and biochemistry, as well as climate, GESAMP reviewed the activities of WG 38. GESAMP noted that WG 38 had met in January 2010 to review and complete three separate papers for publication in peer-reviewed scientific journals in the period of March – April 2010, as follows:

.1 Impacts of atmospheric nutrient deposition on marine productivity: roles of ***nitrogen, phosphorus, and iron***;

2. Impacts of anthropogenic SOx, NOx and NH_3 on acidification of coastal waters and shipping lanes; and

3. Atmospheric organic material and the nutrients it carries to the ocean.

WG 38 was continued at the proposal of WMO and charged, subject to the availability of funds, with providing a more detailed description of the atmospheric transport and deposition processes of ***iron and phosphorus*** to the ocean.

6 **Establishment of trends in global pollution in coastal environments (WG 39):** GESAMP reviewed a further refined proposal by IAEA since GESAMP 36 for this new Working Group, which would use retrospective ecosystem analysis, based on available environmental archives and time-series data. The proposal outlined five specific tasks for a programme with a timeline of four years in total. As only limited support had been confirmed, GESAMP approved terms of reference for a first phase of the project, i.e. the conduct of a bibliographic review (task 1); and a critical review of existing methodologies on suitable environmental archives, dating methods, pollution indicators, analytical techniques and trend analysis (task 2). Follow-up activities could then be agreed in light of the outcome of this first phase and additional financing.

7 **Contribution to the United Nations "Regular Process":** The UN General Assembly decided, in 2009, to establish the UN Regular Process, describing its first five-year assessment cycle and agreed to prepare recommendations on the modalities for implementation of the Process to its next session in the fall of 2010. GESAMP agreed, in light of this development and building on the substantive contributions it made to the "Assessment of Assessments" phase of the Regular Process, to maintain its offer for delivery of specific functions in the Regular Process itself. Consequently, the offer it made in 2009 was reviewed and updated.

8 **Contribution to the GEF Transboundary Waters Assessment Programme:** In 2009, the GEF Transboundary Waters Assessment Programme (TWAP) was launched, aimed at the development of a scientifically sound methodology for assessing the status and changing conditions of the world's major shared freshwater- and marine water bodies, and which will, *inter alia*, feed into the UN Regular Process. UNEP and UNESCO-IOC, as the lead agencies of TWAP, had invited GESAMP in November 2009 to make a contribution to two of the five planned TWAP-modules, i.e. addressing assessments of the "Open Oceans" and the "Large Marine Ecosystems (LMEs)". Acting upon the recommendation of the Executive Committee that GESAMP should become involved in TWAP, GESAMP discussed how it could make a relevant contribution and noted with gratitude UNESCO-IOC's offer to support the participation of one GESAMP representative in the second TWAP-workshop of the "Open Oceans" and "LMEs" modules, to be held in Norway in June 2010. GESAMP noted however that funding for participation in this Programme remained a severe problem.

9 **Identification of new and emerging issues regarding the degradation of the marine environment:** Wishing to further develop its "radar function" on new and emerging issues as a core element of its mission, GESAMP clarified the steps necessary towards the identification of such issues and the route for bringing them to the attention of the Sponsoring Organizations and potential funding bodies. This would include the provision of (1) an initial short written summary by the members clarifying the issue of concern; (2) the appointment of a correspondence group to prepare a scoping paper for discussion at a future session of GESAMP; (3) an in-depth elaboration through a workshop to define the science agenda; and, (4) finally, if deemed necessary, the setting up of a GESAMP working group to provide a full assessment of the issue.

10 GESAMP noted the rapid expansion of coastal energy generating stations, industrial cooling units and desalination plants in many developing countries, most of which rely on electrolytic chlorination to prevent fouling. In assessing the potential environmental impact of electrolytic antifouling systems with reference to national and regional discharge standards, attention was drawn to substances of concern such as Total Residual Oxidants (TRO) as well as halogenated

disinfection by-products, which occur when chlorine interacts with organic matter. It was pointed out that the ballast water management system applications currently being submitted for approval by IMO provide a unique source of analytical data on such by-products and that GESAMP should consider how to develop and publish this resource.

11 GESAMP discussed in detail progress with four new and emerging issues identified for further review at GESAMP 36:

.1 The go-ahead was given for a Workshop on ***micro-plastics*** as a vector in the transport of persistent and toxic substances, in view of the ubiquity and prevalence of plastic waste in the marine environment. This Workshop, (held at UNESCO-IOC Headquarters in Paris from 28 to 30 June 2010) was organized to review the topic, provide a report for possible publication in GESAMP's Reports & Studies series and, as appropriate, develop terms of reference for a possible GESAMP working group;

.2 GESAMP, on the basis of a revised scoping paper agreed, subject to the availability of funding, to initiate a workshop on *endocrine* disruption as a result of ***hypoxia*** in the marine environment to build support for this topic;

.3 GESAMP agreed that a scoping paper should be developed in the intersessional period on ***bio-magnification*** in top predators and its ecological and social implications to provide sufficient background on the key issues involved, the feasibility and especially to identify potential partners for future activities in this field; and

.4 GESAMP agreed to continue its correspondence group on ***Environmental Quality Standards*** (EQS) to further explore the possibility of global standards and to expand the GESAMP website section on EQS.

12 **Other issues**: GESAMP accepted a request from IMO for the peer review in 2010 of a study on establishing equivalency of emerging, alternative (non-chemical) ballast water management systems.

UPDATED COMPOSITE LIST

Notes:

In the Composite List, both EHS and TRN (shipping) names as registered in the database are now shown for each product.

Entries marked * represent cleaning additive components which have had only a partial hazard profile assigned. These profiles cannot be used for mixture calculations in relation to bulk shipments.

ANNEX 7 - GESAMP/EHS COMPOSITE LIST
GESAMP Hazard Profiles

EHS Name TRN Name	EHS TRN	A1a	A1b	A1	A2	B1	B2	C1	C2	C3	D1	D2	D3	E1	E2	E3
Pentasodium triphosphate*	2418	Inorg	0	0	Inorg	1	NI	NI	NI	NI	NI	NI			NI	NI
	3694		**RTECS No**						**CAS No**							
Alcohol(C12 – C14)poly(2)ethoxylate sulfate, sodium salt*	2419	2	NI	2	R	3	NI	NI	NI	NI	NI	NI			NI	NI
	3695		**RTECS No**						**CAS No**							
Acetic acid	13	0	0	0	R	1	NI	1	1	1	3C	3			D	3
Acetic acid	64		**RTECS No**		AF1225000				**CAS No**		64-19-7					
Acetic anhydride	12	0	0	0	R	1	NI	1	0	2	3	3	A		D	3
Acetic anhydride	65		**RTECS No**		AK1925000				**CAS No**		108-24-7					
Acetochlor (ISO)	2047	3	2	2	NR	4	NI	1	0	(1)	0	0			S	2
Acetochlor	66		**RTECS No**		AB5457000				**CAS No**		34256-82-1					
Acetone	15	0	0	0	R	0	0	0	0	0	1	2		NT	DE	2
Acetone	67		**RTECS No**		AL3150000				**CAS No**		67-64-1					
Acetone cyanohydrin	14	0	0	0	R	4	NI	3	4	3	(3)	(3)			D	3
Acetone cyanohydrin	68		**RTECS No**		OD9275000				**CAS No**		75-86-5					
Acetonitrile	16	0	0	0	R	1	NI	1	1	2	1	2			D	2
Acetonitrile	69		**RTECS No**		AL7700000				**CAS No**		75-05-8					
Acetonitrile (Low purity grade)	2333	0	NI	0	R	3	NI	1	1	2	1	2			D	2
Acetonitrile (Low purity grade)	2876		**RTECS No**						**CAS No**							
Mixed acid oil	2306	(0)	NI	(0)	(R)	(0)	NI	0	(0)	(1)	(1)	1			Fp	2
Acid oil mixture from soyabean, corn (maize) and sunflower oil refining	3036		**RTECS No**						**CAS No**							
Acrylamide	23	0	0	0	R	2	0	2	2	(2)	1	2	CMNS		D	3
Acrylamide solution (50% or less)	70		**RTECS No**		AS3325000				**CAS No**		79-06-1					
Acrylic acid	24	0	0	0	R	4	NI	2	2	2	3C	3			D	3
Acrylic acid	71		**RTECS No**		AS4375000				**CAS No**		79-10-7					
Acrylic acid / dimethyldiallylammonium chloride copolymer, partial sodium salt (MWt 1500-4000, aqueous solution)	2406	0	NI	0	R	0	0	0	0	(1)	0	1			D	1
Acrylic acid/dadmac polymer	3682		**RTECS No**						**CAS No**							
Acrylic acid/ethenesulfonic acid copolymer with phosphonate groups, sodium salt (aqueous solution)	2417	0	NI	0	NR	0	NI	0	(0)	(1)	0	1			D	1
Acrylic acid / ethenesulfonic acid copolymer containing carboxylate, phosphonate and sulfonate groups, sodium salt.	3693		**RTECS No**						**CAS No**							
Acrylonitrile	25	0	2	2	NR	3	0	2	3	3	2	2	CSM	NT	DE	3

EHS Name TRN Name	EHS TRN	A1a	A1b	A1	A2	B1	B2	C1	C2	C3	D1	D2	D3	E1	E2	E3
Acrylonitrile	72		**RTECS No**		AT5250000				**CAS No**		107-13-1					
Acrylonitrile-styrene copolymer dispersion in polyether polyol (LOA)	1432	NI	0	0	NI	1	NI	0	(0)	(0)	0	(0)			S	0
Acrylonitrile-Styrene copolymer dispersion in polyether polyol	73		**RTECS No**						**CAS No**							
Adiponitrile	26	0	0	0	R	1	NI	3	(3)	3	3	(3)			FD	3
Adiponitrile	74		**RTECS No**		AV2625000				**CAS No**		111-69-3					
Alachlor (ISO)	1488	3	3	3	NI	4	1	1	0	(2)	1	0	CS		S	3
Alachlor technical (90% or more)	75		**RTECS No**		AE1225000				**CAS No**		15972-60-8					
Alcoholic beverages	293	0	0	0	R	0	0	0	0	0	0	1			D	1
Alcoholic beverages, n.o.s.	85		**RTECS No**						**CAS No**							
Alcohol(C8-C11) poly(2.5-9)ethoxylates	2094	3	3	3	R	3	NI	1	0	(2)	(2)	(2)			D	2
Alcohol (C9-C11) poly (2.5-9) ethoxylate	2209		**RTECS No**						**CAS No**

ANNEX 8

LIST OF CHEMICALS REVIEWED FOR THE GESAMP-BWWG

1 Sodium bromate

2 Potassium bromate

3 Bromoform

4 Chloroform

5 Dibromochloromethane

6 Dichlorobromomethane

7 Sodium hypochlorite

8 Sodium thiosulphate

9 Monobromoacetic acid

10 Dibromoacetic acid

11 Tribromoacetic acid

12 Monchloroacetic acid

13 Dichloroacetic acid

14 Trichloroacetic acid

15 Bromochloroacetic acid

16 Monochloroamine

17 Trichloropropane

18 Dibromoacetonitrile
