## **HAZARD EVALUATION OF SUBSTANCES TRANSPORTED BY SHIPS**

### **Report of the fifty-fifth session of the GESAMP/EHS Working Group on the Evaluation of the hazards of harmful substances carried by ships**

The report of the fifty-fifth session of the GESAMP/EHS Working Group on the Evaluation of the hazards of harmful substances carried by ships, held from 30 April to 4 May 2018, is attached.

Any comments or questions should be addressed to:

Technical Secretary of the GESAMP/EHS Working Group  
Marine Environment Division  
International Maritime Organization  
4 Albert Embankment  
London SE1 7SR  
United Kingdom

- ANNEX 1 LIST OF MEMBERS ATTENDING THE FIFTY-FIFTH SESSION OF  
THE GESAMP/EHS WORKING GROUP
- ANNEX 2 OUTCOME OF ESPH 23 AND PPR 5 ON MATTERS PERTAINING TO  
GESAMP/EHS 55
- ANNEX 3 OUTCOME OF GESAMP 44
- ANNEX 4 GESAMP HAZARD PROFILES FOR NEW SUBSTANCES SUBMITTED FOR  
EVALUATION TO GESAMP/EHS 55
- ANNEX 5 UPDATED GESAMP COMPOSITE LIST
- ANNEX 6 PROPOSED GESAMP/EHS RATING SYSTEM FOR FLAMMABILITY
- ANNEX 7 PROVISIONAL AGENDA FOR THE FIFTY-SIXTH SESSION OF THE  
GESAMP/EHS WORKING GROUP

## 1 INTRODUCTION

1.1 The fifty-fifth session of the GESAMP/EHS Working Group on the Evaluation of the Hazards of Harmful Substances Carried by Ships was held at IMO in London, the United Kingdom, from 30 April to 4 May 2018, chaired by Dr. Thomas Höfer. The list of experts attending the meeting is set out in annex 1.

1.2 Having reviewed the agenda and provisional timetable, the Group adopted both, without amendment.

## 2 OUTCOME OF OTHER BODIES

### Outcome of IMO bodies

2.1 The Group noted that the following meetings of relevance had taken place since the fifty-fourth session of the GESAMP/EHS Working Group:

- .1 the twenty-third intersessional meeting of the Working Group on the Evaluation of Safety and Pollution Hazards of Chemicals (ESPH 23), which took place from 16 to 20 October 2017 (PPR 5/3); and
- .2 the Working Group on the Evaluation of Safety and Pollution Hazards (ESPH), which met during the fifth session of the PPR Sub-Committee from 5 to 9 February 2018 (PPR 5/WP.3);

2.2 The Group noted the information presented by the Secretariat on the outcome of the above-mentioned meetings on matters of relevance to the work of the GESAMP/EHS Working Group, as summarized in annex 2, and agreed to take action under the relevant agenda items, as appropriate.

### Outcome of GESAMP 44

2.3 The Group noted the report by the Chair on the outcome of the forty-fourth session of GESAMP, which took place from 4 to 7 September 2017 in Geneva, Switzerland, hosted by the World Meteorological Organization (WMO). A summary of the outcome of the meeting is set out in annex 3.

## 3 EVALUATION OF NEW SUBSTANCES

3.1 The Group recalled that when submitting new substances for evaluation by the GESAMP/EHS Working Group, a full set of data, addressing all the relevant information requirements set out in the GESAMP/EHS Product Data Reporting Form, was required. The Group further noted that insufficient data, or a lack of adequate supporting arguments, where estimates had been used, would result in no rating being assigned for the end-point concerned or, as a worst case, no full hazard profile being issued for the chemical under review.

3.2 The Group considered the following new substances, which had been submitted for evaluation to this session:

- |    |  |          |
|----|--|----------|
| .1 | Alkyl(branched C10-C18, C12 rich)phenols     | EHS 2504 |
| .2 | Alkanes (C4-C12) linear, branched and cyclic | EHS 2510 |
| .3 | Alkanes (C9-C24) linear, branched and cyclic | EHS 2511 |

.4	Imidazolium compounds, 1-benzyl-4,5-dihydro-1-(hydroxyethyl)-2-norcoco alkyl, chlorides	EHS 2505
.5	Poly(oxy-1,2-ethanediyl), alpha-(nonylphenyl)-omega-hydroxy-, phosphate	EHS 2506
.6	Pyridinium, 1-(phenylmethyl)-, ethyl methyl derivs., chlorides	EHS 2507
.7	Tall oil fatty acids reaction products with 2-[(2-aminoethyl)amino]ethanol, di-ethyl sulphate quaternized	EHS 2508
.8	[[[(phosphonomethyl)imino]bis[ethylenenitrilobis(methylene)]] tetrakisphosphonic acid, ammonium salt solution (60% or less)]	EHS 2509
.9	Poly alkyl(C18-C22)methacrylates/lauryl acrylate/vinyl acetate (40% in naphtha)	EHS 2512
.10	Amides, coco, N-[3-(dibutylamino) propyl], acrylates	EHS 2513
.11	Creosote (coal tar) C8-C22, MW 116-278	EHS 2514

3.3 The Group, in assessing the submitted products, made observations and reached conclusions, as set out in the ensuing paragraphs. The resultant hazard profiles assigned by the Working Group for inclusion in the GESAMP Composite List are set out in annex 4.

#### **EHS 2504 Alkyl(branched C10-C18, C12 rich)phenols**

3.4 The Group noted that a comprehensive set of test data had been submitted for this substance and assigned a GESAMP Hazard Profile accordingly. Having also noted that the data submitted for Alkyl(branched C10-C18, C12 rich)phenols are partly based on studies on Alkyl(branched C12)phenol, the Group agreed that they could be used to re-evaluate the B2 and D3 ratings of Dodecyl phenol (EHS 725). Subsequently, the Group agreed that a review was warranted and agreed to consider this matter under agenda item 4.

<i>Rating</i>	A1a=0	A1b=4	A1=4	A2= NR	B1= 5	B2= 3
	C1= 0	C2= 0	C3= (3)	D1= 3	D2= 3	D3= R
	E2= Fp	E3= 3				

#### **EHS 2510 Alkanes (C4-C12) linear, branched and cyclic (containing benzene up to 1%),** Submitted as: Alkanes (C4-C12) linear, branched and cyclic

3.5 In considering the submission, the Group noted that a full set of data had been provided for the product and assigned a GESAMP Hazard Profile accordingly.

<i>Rating</i>	A1a= (4)	A1b= (4)	A1= (4)	A2=R	B1=(3)	B2=(2)
	C1=0	C2=0	C3=0	D1=2	D2=(1)	D3=CMA
	E2 = F	E3 =3				

3.6 With regard to the E2 rating, the Group noted that the rating of F corresponds to the predominant behaviour of the product once the volatile components have evaporated. In addition, the Group considered the name of the product in the context of the D3 rating of CM, which had been assigned due to the presence of benzene in the product. Subsequently, the Group agreed that a more appropriate name for the Composite List entry was Alkanes (C4-C12) linear, branched and cyclic (containing benzene up to 1%), in order to differentiate it from pure alkanes, which are not carcinogens nor mutagens.

**EHS 2511 Alkanes (C9-C24) linear, branched and cyclic**

3.7 In considering the submission, the Group noted that a full set of data had been provided for the product and assigned the GESAMP Hazard Profile accordingly set out below.

<i>Rating</i>	A1a= (5)	A1b= (4)	A1= (4)	A2=NR	B1=(2)	B2=(1)
	C1=0	C2=(0)	C3=0	D1=(2)	D2=0	D3=A
	E2 = F	E3 =3				

3.8 Having noted that the flash point of the product could be lower or greater than 60°C, depending on the distribution of shorter-length and longer-length alkanes, the Group recognized that the GHP profile could apply to batches of the product with a flashpoint >60°C or ≤ 60°C.

**EHS 2505 Imidazolium compounds, 1-benzyl-4,5-dihydro-1-(hydroxyethyl)-2-norcoco alkyl, chlorides**

3.9 The Group noted that this product had been submitted for a partial profile for eventual inclusion in list 5 of the IMO MEPC.2/Circular. Having considered the full complement of data available to it, the Group assigned the GESAMP Hazard Profile set out below.

<i>Rating</i>	A1a=(0)	A1b=NI	A1=(0)	A2=NR	B1=4	B2=NI
	C1=NI	C2=NI	C3=NI	D1=(2)	D2=(3)	D3=blank
	E2=Fp	E3 =3				

**EHS 2506 Poly(oxy-1,2-ethanediyl), alpha-(nonylphenyl)-omega-hydroxy-, phosphate**

3.10 The Group noted that this product had been submitted for a partial profile for eventual inclusion in list 5 of the IMO MEPC.2/Circular. Nonetheless, the Group noted that a complete complement of data was available and assigned a full GESAMP Hazard Profile, as set out below.

<i>Rating</i>	A1a=(4)	A1b=(3)	A1=(3)	A2=NR	B1=3	B2=(1)
	C1=(1)	C2=(1)	C3=(3)	D1=(2)	D2=(3)	D3= blank
	E2=S	E3=3				

**EHS 2507 Pyridinium, 1-(phenylmethyl)-, ethyl methyl derivs., chlorides**

3.11 The Group noted that this product had been submitted for a partial profile for eventual inclusion in list 5 of the IMO MEPC.2/Circular and assigned the GESAMP Hazard Profile set out below, having considered the full complement of data available to the Group.

<i>Rating</i>	A1a=3	A1b=NI	A1=3	A2=NR	B1=4	B2=2
	C1=NI	C2=NI	C3=NI	D1=(3B)	D2=(3)	D3= blank
	E2=D	E3=3				

**EHS 2508 Tall oil fatty acids reaction products with 2-[(2-aminoethyl)amino]ethanol, di-ethyl sulphate quaternized**

3.12 The Group noted that this product had been submitted for a partial profile for eventual inclusion in list 5 of the IMO MEPC.2/Circular and assigned the GESAMP Hazard Profile set out below, having considered the full complement of data available to the Group.

<i>Rating</i>	A1a=(3)	A1b=NI	A1=(3)	A2=NR	B1=5	B2=2
	C1=NI	C2=NI	C3=NI	D1=(2)	D2=(3)	D3= Ss
	E2=D	E3=3				

**EHS 2509      [[(phosphonomethyl)imino]bis[ethylenenitrilobis(methylene)]]  
tetrakisphosphonic acid, ammonium salt solution (60% or less)**

3.13      The Group noted that this product had been submitted for a partial profile for eventual inclusion in list 5 of the IMO MEPC.2/Circular and assigned the GESAMP Hazard Profile set out below, having considered the full complement of data available to the Group.

<i>Rating</i>	A1a=0	A1b=NI	A1=0	A2=NR	B1=2	B2=(0)
	C1=(0)	C2=(0)	C3=(1)	D1=(1)	D2=(1)	D3= blank
	E2=D	E3=1				

**EHS 2512      Poly alkyl(C18-C22)methacrylates/lauryl acrylate/vinyl acetate (40% in naphtha)**

3.14      Having considered the submission and having noted that a comprehensive set of data had been provided, the Group assigned a GESAMP Hazard Profile accordingly.

<i>Rating</i>	A1a=(5)	A1b=(5)	A1=(5)	A2=NR	B1=0	B2=NI
	C1=0	C2=0	C3=(1)	D1=1	D2=(1)	D3= blank
	E2=Fp	E3=2				

**EHS 2513      Amides, coco, N-[3-(dibutylamino) propyl], acrylates**

3.15      Having considered the submission and having noted that a comprehensive set of data had been provided, the Group assigned a GESAMP Hazard Profile accordingly.

<i>Rating</i>	A1a=(4)	A1b=NI	A1=(4)	A2=NR	B1=4	B2=NI
	C1=0	C2=0	C3=(2)	D1=2	D2=2	D3= blank
	E2=Fp	E3=2				

**EHS 2514      Creosote (coal tar) C8-C22, MW 116-278**

3.16      Having considered the submission and having noted that a full set of data had been provided, the Group assigned a GESAMP Hazard Profile accordingly. Having noted that the data submitted for Creosote (coal tar) C8-C22, MW 116-278 may have relevance for the ratings for Creosote (coal tar) (EHS 524), the Group agreed that a review of this product was warranted and agreed to consider this matter under agenda item 4.

<i>Rating</i>	A1a=NI	A1b=(3)	A1=(3)	A2=(NR)	B1=4	B2=1
	C1=1	C2=0	C3=(2)	D1=2	D2=1	D3=CMRSs
	E2=S	E3=3				

**4      RE-EVALUATION OF SUBSTANCES AND CONSIDERATION OF ISSUES RELATED TO EVALUATIONS**

4.1      The Group recalled that, as part of its work, it routinely considered requests for the re-assessment of products, based on the submission of new data or new scientific insights into the hazards of substances that may result in a change to a hazard profile.

4.2      The Group also recalled its ongoing review and update of the existing GESAMP/EHS files for completeness and consistency and the need for communication of any amendments relating to such matters to the attention of the IMO (i.e. the ESPH Working Group of the PPR Sub-Committee).

4.3 The Group considered a request to undertake a review of the hazard profile for Sodium hydrogen sulphide, solutions (EHS 1252). In this context, the Group also agreed to re-evaluate Sodium hydrogen sulphide/Ammonium sulphide (mixture) (1253).

4.4 The Group further agreed to review two additional substances during the session, based on discussions emanating from the review of the new substances, as follows: Dodecyl phenol (EHS 725) and Creosote (coal tar) (EHS 524).

#### **EHS 1252 Sodium hydrogen sulphide, solutions**

4.5 The Group considered a request for a re-evaluation of this material. In reviewing the data available, the Group amended a number of ratings, as set out below.

*Amended rating* C1=2 C2=2 C3=(3) D1=(3) D2=3 E3=3

#### **EHS 1253 Sodium hydrogen sulphide/Ammonium sulphide (mixture)**

4.6 Having reviewed Sodium hydrogen sulphide, solutions (EHS 1252), the Group also re-evaluated Sodium hydrogen sulphide/Ammonium sulphide (mixture) (EHS 1253), taking into account that similar considerations could apply. Subsequently, the Group amended a number of ratings, as set out below.

*Amended rating* C1=(2) C2=(2) C3=(3) D1=(3) D2=(3) E3=3

#### **EHS 725 Dodecyl phenol**

4.7 During its review of the data submitted in connection with the new product submission for Alkyl(branched C10-C18, C12 rich)phenols (EHS 2504), and having cross-referenced this information with that on file for Dodecyl phenol (EHS 725), the Group agreed that a review of the B2 and D3 ratings was warranted. Following consideration, the Group agreed that the B2 rating should be modified from NI to (3) and a D3 rating of R should be added.

*Amended rating* B2=(3) D3=R

#### **EHS 524 Creosote (coal tar)**

4.8 During its review of the data submitted in connection with the new product submission for Creosote (coal tar) C8-C22, MW 116-278 (EHS 2514) the Group noted that the data may have relevance for Creosote (coal tar) (EHS 524). Consequently, the Group reviewed the ratings for Creosote (coal tar) and agreed that the D3 rating should be modified from CM to CMRSs.

*Amended rating* D3=CMRSs

#### **Products submitted by industry to GESAMP/EHS 54 for review of the C3 rating**

4.9 The Group recalled that GESAMP/EHS 54, having received a request from industry to review the C3 ratings for a number of products, had noted that further information would be needed for it to consider these products.

4.10 The Group also recalled that at EHS 54, it had agreed the properties and information that would be required, and had noted that submissions should be made on an individual chemical basis, rather than as a consolidated list or table.

4.11 As no submissions had been received at this session, the Group agreed to suspend any further consideration of these products until such time as the information specified by EHS 54 had been submitted.

## **5 CLASSIFICATION ISSUES**

### **Introduction of new column E1 on flammability**

5.1 The Group recalled that at EHS 54 it had agreed to remove all tainting information currently included in column E1 and had also agreed to re-assign column E1 for the purposes of capturing the flash point and flammability hazards of chemicals (refer to PPR.1/Circ.4, annexes 4 and 5).

5.2 In this context, the Group noted the request by PPR 5 for the Group to take into account the comments and reservations of the ESPH Working Group that met during PPR 5, in relation to the proposed flammability ratings and their proposed inclusion in the GESAMP Hazard profiles listed in the GESAMP/EHS Composite list.

5.3 Having considered and discussed the relevant outcome of the ESPH Working Group, the Group took all arguments into consideration and agreed to suitable new ratings of the flammability hazard, as shown in annex 6.

5.4 Having agreed to the above ratings for flammability, the Group agreed to incorporate the table set out in annex 6 in the revised draft Reports & Studies No.64 (see also agenda item 7).

5.5 The Group continued its review of flashpoint information for products, extracted from the GISIS database, and agreed to continue the review intersessionally, with a view to completing the work at EHS 56 for incorporation in the Composite List once the revised Reports & Studies No.64 had been published.

### **Cut-off values to be used when assessing mixtures containing components with a long-term health effect**

5.6 The Group noted the request by PPR 5 to consider the proposal in document PPR 5/3/3 (Norway) and to advise the ESPH Working Group with regard to recommended cut-off values to be used when assessing mixtures containing components with a long-term health effect.

5.7 Due to time constraints, the Group was unable to finalize the requested advice. However, the Group noted that, as part of its revision of Reports & Studies No.64, it was in the process of developing text describing the procedure used by the EHS Working Group for assigning ratings to mixtures for all columns, including column D3. The Group agreed that the relevant text from the revised Reports and Studies No.64 would form the basis for developing a simplified recommendation, at EHS 56, for consideration by the ESPH Working Group.

## **6 CONSOLIDATION OF EXISTING DATA FILES**

6.1 The Group recalled the ongoing review of the GESAMP/EHS files was a regular agenda item.

6.2 Not having had sufficient time to review these files during the session, in light of other higher priority work on its agenda, the Group agreed to defer consideration of this item to its next session.

## **7 REVISION OF REPORTS AND STUDIES NO.64**

7.1 The Group considered the draft revision of Reports & Studies No. 64 that had been prepared intersessionally by the EHS sub-groups under the coordination of the Chair.

7.2 Having recalled the agreed timeline for completion of the revision of Reports and Studies No.64 for finalization and publication in time for the 50th anniversary of GESAMP in 2019, the Group comprehensively reviewed the draft that had been prepared intersessionally and concluded that all technical and scientific matters had been considered sufficiently and to the satisfaction of the Group.

7.3 The Group, inter alia, further developed the draft text that had been developed intersessionally, describing the procedure used by the EHS Working Group for assigning ratings to mixtures for all columns. Due to time constraints, the Group was not able to create a final version of the draft text pertaining to mixtures and agreed to further refine the already comprehensive draft during the four weeks immediately following EHS 55. The Group managed to finalize all other parts of the draft revision of Reports and Studies No.64, and requested the Secretariat to effect editorial correction and to incorporate the text pertaining to the assignments of ratings to mixtures.

7.4 It was agreed that, as the draft revision was the result of a comprehensive review by the Group, it might be subject to a formal review by GESAMP and the Group invited GESAMP to consider assigning a new number to the Reports and Studies once approved.

7.5 Subsequently, the Group invited the Secretariat to take the appropriate action for the draft revision of Reports and Studies No.64 to be published in time for the 50th anniversary of GESAMP in 2019 and preferably before EHS 56.

## **8 ANY OTHER BUSINESS**

### **Draft provisional agenda and date of the next session**

8.1 The Group agreed to the draft provisional agenda for its next session, set out in annex 7, and that its next meeting would be held from 8 to 12 April 2019, at IMO headquarters in London.

## **9 CONSIDERATION AND ADOPTION OF THE REPORT**

9.1 The Group adopted its report, noting that it would be circulated as PPR.1/Circ.5.

## ANNEX 2

### OUTCOME OF ESPH 23 AND PPR 5 ON MATTERS PERTAINING TO GESAMP/EHS 55

#### Evaluation of chemicals

1 The ESPH Working Group, at ESPH 23 and PPR 5, evaluated a number of new products, cleaning additives and trade-named products for their consequential inclusion in the MEPC.2/Circular.

#### *Drilling brines*

2 Having considered the outcome of GESAMP/EHS 54 with regard to the GESAMP Composite List linked to the entries for drilling brines contained in the IBC Code, ESPH 23 agreed to introduce two entries in list 1 of the MEPC.2/Circular, one for "Drilling brines (containing calcium bromide)" with the same carriage requirements as the existing chapter 17 entry for "Drilling brines, including: calcium bromide solution, calcium chloride solution and sodium chloride solution (TRN 308)", and another for "Drilling brines (containing zinc chloride)" with the same carriage requirements as the existing chapter 17 entry for "Drilling brines (containing zinc salts) (TRN 307)". The entries for drilling brines in the draft revised chapter 17 of the IBC Code were also renamed accordingly.

3 The Group recognized that the new renamed entries for drilling brines were more restrictive than the existing entries for drilling brines in chapter 17 of the IBC Code, since they covered drilling brines containing calcium bromide or zinc chloride only. In this regard, the Group confirmed that, once the revised chapter 17 entered into force (expected to be 1 January 2021), the carriage of drilling brines containing calcium chloride, sodium chloride or zinc salts other than zinc chloride would not be permitted, unless new entries addressing them were included in the revised chapter 17 of the IBC Code or in list 1 of the MEPC.2/Circular.

4 Consequently, ESPH 23 invited industry and relevant stakeholders to submit data to GESAMP/EHS for drilling brines containing calcium chloride, sodium chloride or zinc salts other than zinc chloride, as appropriate. In this regard, the Group noted that the GESAMP/EHS fees for evaluation of new substances would be waived, should submissions for the aforementioned types of drilling brines be made prior to the entry into force of the revised chapter 17 of the IBC Code.

#### *Paraffins*

5 Based on the the outcome of GESAMP/EHS 54 with regard to paraffins, the Group agreed for the following four entries to be introduced in list 1 of the MEPC.2/Circular:

- .1 "n-Alkanes (C10 – C20)", corresponding to the chapter 17 entry "n-Alkanes (C10+)";
- .2 "Paraffin wax, highly-refined", corresponding to the chapter 17 entry "Paraffin wax";
- .3 "Paraffin wax, semi-refined", corresponding to the chapter 17 entry "Petrolatum"; and
- .4 "Hydrocarbon wax", corresponding to the chapter 17 entry "Waxes".

6 The carriage requirements of the renamed entries were also amended based on proposals contained in document ESPH 23/3/2 (Germany) and the revised entries were reflected in the draft revised chapter 17 of the IBC Code. Having noted that the renamed entries would also need to be reflected in chapter 19 of the IBC Code, the Group agreed consequential draft amendments to chapter 19 of the IBC Code.

#### ***Carriage requirements for Methyl alcohol***

7 ESPH 23 agreed, on the basis of expert judgement, taking into account industry experience and the information presented in document ESPH 23/6/1 (Liberia et al.), not to include special requirement 15.12.3.1 in column o of the carriage requirements assigned for Methyl alcohol in the draft revised chapter 17 of the IBC Code. Additionally, an asterisk footnote (\*) was added to the product name, recalling that this footnote "indicates that with reference to chapter 21 of the IBC Code (paragraph 21.1.3), deviations from the normal assignment criteria used for some carriage requirements have been implemented."

8 Having noted that paragraph 21.1.3 of the IBC Code requires that "where deviations from the criteria have been recognized, they shall be properly recorded with justifications", the Group agreed to record the following justification in the next revision of the circular on *Decisions with regard to the categorization and classification of products* (BLG.1/Circ.33):

"During the review of chapters 17 and 18 of the IBC Code, it was agreed the requirements in paragraph 15.12.3.1 of the IBC Code would not to be applied from the revised carriage requirements, on the basis of experience and expert judgement. All other requirements of 15.12 would apply in addition to all other applicable carriage requirements."

9 ESPH 23 further noted that a full review of section 15.12.3 of the IBC Code may be needed in the future and invited proposals to the PPR Sub-Committee.

#### **Rating for flammability in the GESAMP Hazard Profile**

10 With regard to the the reassignment of column E1 for the purposes of capturing the new flammability ratings ESPH 23 noted the view expressed by some delegations, that the descriptions of the flammability ratings, as proposed by the GESAMP/EHS Working Group, in combination with the flashpoint ranges used to assign the flammability ratings, had the potential to cause confusion when evaluating products under the IBC Code.

11 The ESPH Working Group at PPR 5 considered this matter further, having been instructed to consider document PPR 5/3/1 (Secretariat), which had been submitted on behalf of the Chair of the GESAMP/EHS Working Group and provided background information regarding the flammability ratings proposed by GESAMP/EHS 53 and the relevant comments by ESPH 23.

13 Subsequently, PPR 5, based on the recommendation of the ESPH Working Group, requested GESAMP/EHS 55 to take into account the comments and reservations of the Group, as set out in paragraph 7.4 of document PPR 5/WP.4, relating to the proposed flammability ratings in the GESAMP Hazard Profiles.

### **Cut-off values to be used when assessing mixtures**

14 The ESPH Working Group at PPR 5 considered document PPR 5/3/3 (Norway), proposing the development of recommended cut-off values to be used when assessing mixtures containing components with a long-term health effect (e.g. a carcinogenic component). The Group was of the view that the development of recommended cut-off values would be welcome but also recognized that it may take time given the complexity of the matter.

15 Subsequently, PPR 5, based on the recommendation of the Group, requested the GESAMP/EHS Working Group to consider the proposal in document PPR 5/3/3 and to advise the ESPH Working Group with regard to recommended cut-off values to be used when assessing mixtures containing components with a long-term health effect. In this regard, the Group recognized that the annex to document PPR 5/3/3 had been included as an example and should not restrict the deliberations of the GESAMP/EHS Working Group.

### **Guidance for assessing and classifying products under annexes I and II of MARPOL**

#### ***Energy-rich fuels***

16 ESPH 23 and the ESPH Working Group at PPR 5, prepared a draft MEPC circular on Guidelines for the carriage of energy-rich fuels and their blends, which was subsequently agreed by PPR 5 for submission to MEPC 73 with a view to approval (PPR 5/24, annex 3).

17 PPR 5 also agreed, subject to approval of the above-mentioned draft MEPC circular, to the inclusion of a new annex 12 to the MEPC.2/Circular for the purpose of listing substances that, following assessment by the ESPH Working Group, are deemed to be subject to MARPOL Annex I.

#### ***General guidance for the assessment of products under MARPOL Annex I or II***

18 ESPH 23 and the ESPH Working Group at PPR 5, owing to time constraints, were unable to make progress on the development of general guidance for determining whether products, including products that are not energy-rich fuels (e.g. petroleum-derived products), should be covered by MARPOL Annex I or II and, consequently, agreed to further consider the matter at future sessions.

### **Draft Amendments to MARPOL Annex II and consequential amendments to the IBC Code to address issues related to the discharge of persistent floating substances with a high viscosity and/or high melting point**

19 ESPH 23 and the ESPH Working Group at PPR 5 prepared draft amendments to Annex II of MARPOL and the consequential amendments to the IBC and BCH Codes to address issues related to the discharge of persistent floating substances with a high viscosity and/or high melting point (see PPR 5/24, annexes 4, 1 and 2, respectively). PPR 5 agreed to the draft amendments for submission to MEPC 73 for approval and subsequent adoption.

### **Revision of chapters 17, 18, 19 and 21 of the IBC Code**

20 The Group completed the comprehensive review of chapters 17, 18 and 19 of the IBC Code based on the draft revised chapter 21 that had been approved in principle by MSC 98 and MEPC 70. The draft revised chapters (PPR 5/24/Add.1, annex 1) were agreed to by PPR 5 for submission to MEPC 73 and MSC 100, with a view to approval and subsequent adoption.

\*\*\*

## ANNEX 3

### OUTCOME OF GESAMP 44

1 The 44th session of the Joint Group of Experts on the Scientific Aspects of Marine Environmental Protection (GESAMP) was held in Geneva, Switzerland, from 4 to 7 September 2017. It was hosted by the World Meteorological Organization (WMO) and chaired by Dr. Peter Kershaw.

#### GENERAL ACTIVITIES

2 GESAMP acknowledged the continuing support of the GESAMP Office, including the contribution of the GESAMP Administrative Coordinator. This year marked the retirement of Mr. Edward Kleverlaan as Technical Secretary for IMO. His contribution was warmly acknowledged by GESAMP and we wish him a happy retirement. Mr. Fredrik Haag has taken over this position.

3 A notable achievement has been the launch of the new website, including a new design, new features and updated information about the working groups (see <http://www.gesamp.org/work/groups/1>). The reports of the GESAMP/EHS sessions have been uploaded after finalization (see <http://www.gesamp.org/work/groups/1/sessions-reports>).

4 The status of the Pool of Experts, and efforts to maintain and improve communication with those experts who have shown an interest in GESAMP, have been discussed at recent GESAMP sessions but without resolution.

5 The nine Sponsoring Organisations committed to supporting the activities of GESAMP in 2017-2018. In 2019, GESAMP will be celebrating 50 years since its establishment in 1969. In this context the GESAMP Office is seeking further suggestions on ways to commemorate GESAMP's 50th anniversary.

#### WORKING GROUP 1

5 The Chairman of Working Group 1 reported on progress made during GESAMP/EHS 54. GESAMP noted:

- .1 that 13 new substances were evaluated and full GESAMP Hazard Profiles (GHPs) assigned, the GHPs for 9 substances were either modified or reconfirmed, based on consideration of new data, and information about inhalation toxicity for 24 chemicals was submitted, but in most cases was insufficient for any final assessment (data on 48 substances evaluated in total);
- .2 the WG's progress in revising the existing hazard evaluation procedure;
- .3 the WG's intention to finalize a new GESAMP Reports and Studies publication in time for GESAMP's 50th anniversary in 2019;
- .4 that the IMO ESPH Working Group and the PPR Sub-Committee requested the GESAMP/EHS Working Group to amend the methodology concerning vapour inhalation hazard as a matter of priority – noting the timeline of the revision of the IBC Code by IMO; and
- .5 the concerns regarding the membership and funding issues.

6 GESAMP further noted that GESAMP/EHS finalized draft texts and rationales during the 54th session in 2017. The future procedure will include a more detailed evaluation of the vapour inhalation hazard, the flammability hazard will eliminate the rating for tainting (which is now considered obsolete) and will revise the procedure for the assessment of hazards for inorganic substances.

7 GESAMP recalled that the funding of Working Group 1 is based on a fixed fee, which is charged for each new product evaluation. It was noted, however, that to date no fees were applied for cases where requests from industry for a revised hazard evaluation were submitted. As reported following discussions at GESAMP 42, GESAMP noted that the level of effort involved in these re-evaluations was considerable and, as a consequence, consideration should be given to the introduction of a fee for this service, as is done for the full assessments. The responsible IMO bodies agreed to request the GESAMP/EHS Working Group to continue monitoring this issue and report back, as appropriate.

## **OTHER WORK**

### **Review of applications for "active substances" to be used in Ballast Water Management systems (WG 34)**

8 Concerning Working Group 34, the "GESAMP Ballast Water Working Group", GESAMP noted that the Ballast Water Management Convention entered into force on 8 September 2017. The task of WG 34 is to evaluate the risks for the crew, the ships' safety, the risk for the public at large of the Ballast Water Management Systems as well as their environmental safety. The evaluation *Methodology* of WG 34 has been defined by the Working Group as a living document. However, at the request of GESAMP, the WG had initiated the drafting of a Reports & Studies report on the whole subject including the *Methodology*, which was, however, still a rather premature draft at GESAMP 44. It was agreed to produce a final draft manuscript for the publication in time for the next annual session of GESAMP in 2018, in order to have the report peer reviewed and printed before 50th anniversary of GESAMP in 2019.

### **Atmospheric input of chemicals to the ocean (WG 38)**

9 Working Group 38 on "Atmospheric input of chemicals to the ocean" held one meeting in 2017 and presented its scientific results at a number of high-level meetings and scientific conferences. The success of this WG in delivering high-level assessment and peer-reviewed publications on the atmospheric input of chemicals to the ocean has contributed to the advancement of knowledge and increasing recognition of these impacts. WG 38 has prepared a synthesis of the results from the scientific papers in a draft report which was reviewed by GESAMP and published in early 2018 as Reports & Studies No. 97.

### **Establishment of trends in global pollution in coastal environments (WG 39)**

10 Working Group 39 on "Establishment of trends in global pollution in coastal environments" is to provide a retrospective analysis using dated environmental archives and time-series data from peer-reviewed published research. Of the over 1,000 papers that were initially screened, 327 were included in the final database with data from 49 Large Marine Ecosystems. The Working Group was requested to complete the final draft report by August 2018, for review first by GESAMP members, followed by external reviewers in the latter half of 2018.

## **Sources, fate and effects of plastics and microplastics in the marine environment (WG 40)**

11 "Sources, fate and effects of plastics and micro-plastics and in the environment" are dealt with in Working Group 40. The objectives for 2017-2018 are to develop guidelines covering terminology and methodologies for the sampling and analysis of marine macroplastics and microplastics, more specifically: the size and shape definitions of particles; sampling protocols for the whole spectrum of particle/object sizes in surface and sub-surface seawater, seabed sediments, shorelines and biota; and methodologies for physical and chemical identification and analysis of polymers and associated chemicals requirements for monitoring and assessment. The next report will be made available in a joint publication by GESAMP, IOC and UN Environment, with a target date of December 2018.

## **Marine geoengineering (WG 41)**

12 The "Working Group on Marine Geoengineering" (WG 41) had decided to select an illustrative approach across each of eight distinct geoengineering categories: ocean iron fertilization; CO<sub>2</sub> storage on the seabed; foams to increase ocean albedo; direct addition of alkaline material; marine cloud brightening; artificial upwelling; macroalgal cultivation; fertilization for fish stock enhancement. A full draft report of the year-two work is expected to be finalized in the first quarter of 2018, followed by a peer review, which would be needed prior to publication.

## **Impacts of wastes and other matter in the marine environment from mining operations, including marine mineral mining (WG 42)**

13 In 2016, GESAMP established Working Group 42 on "Impacts of wastes and other matter in the marine environment from mining operations, including deep-sea mining". GESAMP discussed the relationship of GESAMP with the International Seabed Authority (ISA) with relation to deep sea mining and WG 42. It was noted that it would be an advantage to have the ISA as a formal co-sponsor of the Working Group as this would encourage a flow of information from ISA to WG 42 and vice versa. In addition, engagement would also give the opportunity to discuss/identify transboundary issues related to deep-sea mining from territorial waters to high seas and cumulative effects from more than one mining site in an area.

## **Scoping activities**

### ***Relevance of inputs of disinfection byproducts (DBPs) into the marine environment***

14 A report was given on the scoping activity on the relevance of inputs of disinfection byproducts (DBPs) into the marine environment. GESAMP noted that there were several challenges with estimating the contribution of the various sources to a global overview of DBPs, as well as regional and local variations. GESAMP agreed to convene a workshop in Germany in 2018.

### ***Main sources of pollution in the marine environment***

15 UNDP, through the GESAMP members, noted the frequently cited figure of 80% of ocean pollution is land-based (often quoted in various media, publications and other materials), the other 20% being from ships and marine infrastructure. It is believed that this figure is derived from a study, probably by UN Environment, from some time in the 80s. Since that time, the ocean pollution landscape has changed dramatically. GESAMP agreed to establish a correspondence group to prepare a scoping paper during the intersessional period on possible

options for updating the overview of main sources of pollution in the marine environment. The paper will be presented and discussed at the next annual session of GESAMP.

### ***Impact of pharmaceuticals and other novel chemicals on wastewater***

16 GESAMP considered a scoping paper on the impact of pharmaceuticals and other novel chemicals on wastewater. GESAMP noted that the scope, as presented, was too broad for involvement by GESAMP, and that a more narrow focus would be of interest to some of the Sponsoring Organizations. It was proposed that a clearer focus on the marine environment, and environmentally persistent pharmaceuticals, would be beneficial. It was further noted that it was essential to specify the chemicals of concern, and do an extended literature review, including studies available on estuarine and coastal environments. Subsequently, GESAMP agreed to revise the scoping paper in the intersessional period, with the revised, more clearly defined focus on the marine environment. It was also agreed to pursue the possibility of convening a workshop under the lead of UN Environment, based on the revised scoping paper.

### ***GESAMP Side event***

17 In the afternoon of Wednesday, 6 September, WMO and GESAMP held a special side event titled "CO<sub>2</sub> in the Atmosphere-Ocean System: Impacts and Feedbacks". Globally averaged atmospheric CO<sub>2</sub> has increased by ~40% since pre-industrial times (before 1750). The largest CO<sub>2</sub> sinks are the land biosphere and the oceans, with the latter absorbing ~26% of the emitted anthropogenic CO<sub>2</sub>.

18 A direct consequence of the excess CO<sub>2</sub> absorbed by the oceans is ocean acidification. Since the beginning of the industrial revolution, the ocean has become ~27% more acidic and ocean acidity could increase by 150% by 2050. Other impacts on the oceans related to increases in atmospheric GHGs include warming and deoxygenation, as >90% of the heat energy accumulated in the climate system is stored in the ocean. There is a potential that the ocean sink might become saturated and respond by increasing the fraction of naturally emitted CO<sub>2</sub> and other GHGs thus accelerating their atmospheric growth rate. Understanding and quantifying the magnitude and impacts of this feedback are of urgent interest.

19 The side event was intended to provide an overview of existing scientific knowledge on this topic and to discuss how this ties in with GESAMP's existing and/or future work.

**ANNEX 4**

**GESAMP HAZARD PROFILES FOR NEW SUBSTANCES SUBMITTED FOR  
EVALUATION TO GESAMP/EHS 55**

1 This annex sets out the GESAMP Hazard Profiles (GHP) assigned for the products submitted to the current session. The respective substances and their GHPs are summarized in the subsequent table.

ANNEX 4 - GESAMP HAZARD PROFILES FOR NEW SUBSTANCES SUBMITTED FOR EVALUATION TO GESAMP/EHS 55

## ANNEX 5

### UPDATED GESAMP COMPOSITE LIST

#### Notes:

- 1 In the Composite List, both EHS and TRN (shipping) names are shown for each product. The alphabetical listing of the products is based on the EHS names.
- 2 Any changes introduced in the table since the last issue of the Composite List are highlighted.
- 3 Entries with an EHS name marked with a single asterisk (\*) represent cleaning additive components that have only a partial hazard profile assigned. These profiles **cannot be used** for mixture calculations in relation to bulk shipments.
- 4 Entries with an EHS name marked with a double asterisk (\*\*) represent mixture components for which only a partial hazard profile has been assigned. These profiles **may be used** for mixture calculations in relation to bulk shipments.
- 5 Entries with an EHS name marked with a hash mark (#) reflect that for the **C3 rating**, the product, as a vapour rather than an aerosol or mist, could be considered to have a lower inhalation hazard for the purposes of risk management.
- 6 Entries with an EHS name marked with an exclamation mark (!) refer to a mixture that contains components with substantially different physical properties and therefore different physical behaviours when released in the marine environment. The **E2 rating** assigned reflects the most severe impact from an environmental standpoint. For example, a mixture assigned a rating of Fp may also have a major component(s) with sinker characteristics (S) or dissolver characteristics (D).

**ANNEX 6**

**PROPOSED GESAMP/EHS RATING SYSTEM FOR FLAMMABILITY**

**NOTE:** The table shown below reflects the revised rating structure to replace the first draft shown in table 3 of annex 5 to the GESAMP/EHS 54 report (PPR.1/Circ.4).

<b>Rating*</b>	<b>Description</b>	<b>Flashpoint temperature range (-C)</b>	
0	Not Flammable (does not burn)	-	
1	Low Flammability Potential	>93	
2	Combustible	>60	≤93
3	Flammable	≥23	≤60
4	Highly Flammable	<23	

\* NI indicates that insufficient flashpoint data were available to allow a rating

\*\*\*

**ANNEX 7**

**PROVISIONAL AGENDA FOR THE FIFTY-SIXTH SESSION OF THE  
GESAMP/EHS WORKING GROUP**

- 1 Adoption of the agenda
  - 2 Outcome of other bodies
  - 3 Evaluation of new substances
  - 4 Re-evaluation of substances and consideration of issues related to evaluations
  - 5 Classification issues
  - 6 Consolidation of existing data files
  - 7 Communication and publication
  - 8 Any other business
  - 9 Consideration and adoption of the report
-
