HAZARD EVALUATION OF SUBSTANCES TRANSPORTED BY SHIPS

Report of the fifty-ninth session of the GESAMP Working Group on the Evaluation of the Hazards of Harmful Substances Carried by Ships

The report of the fifty-ninth session of the GESAMP Working Group on the Evaluation of the Hazards of Harmful Substances Carried by Ships (GESAMP/EHS Working Group), held by correspondence and video conferences from 16 March to 13 May 2022, is attached.

Any comments or questions should be addressed to:

| ANNEX 5 | PROVISIONAL AGENDA FOR THE SIXTIETH SESSION OF THE GESAMP/EHS WORKING GROUP |

1 INTRODUCTION

1.1 The fifty-ninth session of the GESAMP Working Group on the Evaluation of the Hazards of Harmful Substances Carried by Ships (GESAMP/EHS Working Group) was held by correspondence and video conferences 16 March to 13 May 2022 and was chaired by Mr. Richard Luit. The list of experts who attended the meeting is set out in annex 1.

1.2 Having reviewed the agenda and provisional timetable, the Group adopted both, without amendment.

2 OUTCOME OF OTHER BODIES

Outcome of IMO bodies

2.1 The Group noted that the following meetings of relevance had taken place since the fifty-eighth session of the GESAMP/EHS Working Group:

- .1 the forty-eighth session of GESAMP, which took place from 6 to 12 September 2021;
- .2 the twenty-seventh intersessional meeting of the Technical Group on the Evaluation of Safety and Pollution Hazards of Chemicals (ESPH 27), which took place from 11 to 15 October 2021 (PPR 9/3); and
- .3 the ninth session of the PPR Sub-Committee, which took place from 4 to 8 April 2022 (PPR 9/21).

2.2 The Group noted the information presented by the Secretariat on the outcome of the above-mentioned meetings on matters of relevance to the work of the GESAMP/EHS Working Group (see annex 2), in particular that ESPH 27:

- .1 had concluded that, moving forward, it would assess mixtures against the discharge requirements in regulation 13.7.1.4 of MARPOL Annex II on a case-by-case basis, taking into account, inter alia, the advice by GESAMP/EHS 58, with the aim of developing a consistent approach and methodology; and
- .2 had invited CEFIC to keep ESPH informed of developments regarding the potential re-evaluation of "Creosote (coal tar)" by GESAMP/EHS.

3 EVALUATION OF NEW SUBSTANCES

3.1 The Group recalled that when submitting new substances for evaluation by the GESAMP/EHS Working Group, a full set of data, addressing all the relevant information requirements set out in the GESAMP/EHS Product Data Reporting Form, is required. The Group further noted that insufficient data, or a lack of adequate supporting arguments, where estimates had been used, would result in no rating being assigned for the hazard concerned or, as a worst case, no full hazard profile being issued for the chemical under review.

3.2 The Group considered the following new substances*, which had been submitted for evaluation to this session:

- | | | |
|----|--|----------|
| .1 | 1-(2-Hydroxyethyl)-2-nor(tall oil alkyl)-2-imidazoline | EHS 2556 |
| .2 | Dinonylphenol-formaldehyde-nonylphenol copolymer | EHS 2557 |
| .3 | Oxirane, methyl-, polymer with 1,3-diisocyanatomethylbenzene and oxirane | EHS 2558 |
| .4 | 9-Octadecen-1-amine, (Z)- | EHS 2559 |

* The names of the substances shown in the list directly under paragraph 3.3 are in accordance with the submissions prior to GESAMP/EHS 59. The names agreed by GESAMP/EHS following consultation with the submitters are shown from paragraph 3.4 onwards and in annex 3.

| | | |
|-----|---|----------|
| .5 | Formaldehyde, polymer with 4-(1,1-dimethylethyl)phenol, methyloxirane and oxirane | EHS 2560 |
| .6 | Methanesulphonic acid | EHS 2561 |
| .7 | Brassica carinata oil | EHS 2562 |
| .8 | Spent bleaching earth oil | EHS 2563 |
| .9 | Spent bleaching earth oil fatty acid distillate | EHS 2564 |
| .10 | Quaternary ammonium compounds, benzyl-C12-18 (even-numbered)-alkyldimethyl, chlorides | EHS 2565 |

3.3 The Group, in assessing the submitted products, made observations and reached conclusions, as set out in the ensuing paragraphs. The resultant hazard profiles assigned by the Working Group for inclusion in the GESAMP Composite List are set out in annex 3.

EHS 2556 1-(2-Hydroxyethyl)-2-nor(tall oil alkyl)-2-imidazoline

3.4 Having considered the submission and the data provided, the Group confirmed the name of the substance as submitted and assigned a GESAMP Hazard Profile accordingly.

| A1a | A1b | A1 | A2 | B1 | B2 | C1 | C2 | C3a | C3b | C3 | D1 | D2 | D3 | E1 | E2 | E3 |
|-----|-----|----|----|----|----|----|----|-----|-----|-----|----|----|----|----|----|----|
| 5 | NI | 5 | NR | 5 | 2 | 0 | 0 | (3) | NI | (3) | 3 | 3 | | 1 | Fp | 3 |

EHS 2557 Dinonylphenol-formaldehyde-nonylphenol copolymer (62% in paraffin oil)
Submitted as: Dinonylphenol-formaldehyde-nonylphenol copolymer

3.5 Having considered the submission and the data provided, the Group agreed that "Dinonylphenol-formaldehyde-nonylphenol copolymer (62% in paraffin oil)" would be a more appropriate name for entry into the Composite List, considering that the solvent influenced the A1 rating.

3.6 Having noted that following evaporation of the solvent the copolymer would float, and having also noted that the overall viscosity of the mixture was 2140 mPa.s at 40°C, the Group agreed that the substance should be regarded as a "Persistent Floater" (i.e. E2 = Fp).

3.7 The Group also considered whether it would be appropriate to assign an aspiration hazard in column D3 due to the solvent. However, since the overall viscosity of the mixture was higher than the GHS threshold for assigning an aspiration hazard to aliphatic, alicyclic and aromatic hydrocarbons, the Group agreed to leave the D3 rating blank. The resulting GESAMP Hazard Profile is set out below.

| A1a | A1b | A1 | A2 | B1 | B2 | C1 | C2 | C3a | C3b | C3 | D1 | D2 | D3 | E1 | E2 | E3 |
|-----|-----|-----|----|----|----|----|----|-----|-----|-----|----|----|----|----|----|----|
| (5) | NI | (5) | NR | 0 | 0 | 0 | 0 | (0) | NI | (0) | 0 | 0 | | 3 | Fp | 2 |

EHS 2558 Oxirane, methyl-, polymer with 1,3-diisocyanatomethylbenzene and oxirane (80% in naphtha)
Submitted as: Oxirane, methyl-, polymer with 1,3-diisocyanatomethylbenzene and oxirane

3.8 Having considered the submission and the data provided, the Group agreed that "Oxirane, methyl-, polymer with 1,3-diisocyanatomethylbenzene and oxirane (80% in naphtha)" would be a more appropriate name for entry into the Composite List, considering that the solvent influenced the A1 rating.

3.9 The Group also considered whether it would be appropriate to assign an aspiration hazard in column D3 due to the solvent. However, since the overall viscosity of the mixture was higher than the GHS threshold for assigning an aspiration hazard to aliphatic, alicyclic and aromatic hydrocarbons, the Group agreed to leave the D3 rating blank. The resulting GESAMP Hazard Profile is set out below.

| A1a | A1b | A1 | A2 | B1 | B2 | C1 | C2 | C3a | C3b | C3 | D1 | D2 | D3 | E1 | E2 | E3 |
|-----|-----|-----|----|----|----|----|----|-----|-----|-----|----|----|----|----|----|----|
| (5) | (5) | (5) | NR | 3 | 0 | 0 | 0 | (0) | NI | (0) | 0 | 0 | | 2 | Fp | 2 |

EHS 2559 9-Octadecen-1-amine, (Z)-

3.10 Having considered the submission and the data provided, the Group confirmed the name of the substance as submitted and assigned a GESAMP Hazard Profile accordingly.

| A1a | A1b | A1 | A2 | B1 | B2 | C1 | C2 | C3a | C3b | C3 | D1 | D2 | D3 | E1 | E2 | E3 |
|-----|-----|-----|----|----|----|----|-----|-----|-----|-----|----|-----|----|----|----|----|
| (4) | NI | (4) | R | 4 | 2 | 1 | (0) | (3) | NI | (3) | 3 | (3) | | 1 | F | 3 |

EHS 2560 Formaldehyde, polymer with 4-(1,1-dimethylethyl)phenol, methyloxirane and oxirane (60% in naphtha)

Submitted as: Formaldehyde, polymer with 4-(1,1-dimethylethyl)phenol, methyloxirane and oxirane

3.11 Having considered the submission and the data provided, the Group agreed that "Formaldehyde, polymer with 4-(1,1-dimethyl)phenol, methyloxirane and oxirane (60% in naphtha)" would be a more appropriate name for entry into the Composite List considering that the solvent influenced the A1 rating.

3.12 The Group also considered whether it would be appropriate to assign an aspiration hazard in column D3 due to the solvent. However, since the overall viscosity of the mixture was higher than the GHS threshold for assigning an aspiration hazard to aliphatic, alicyclic and aromatic hydrocarbons, the Group agreed to leave the D3 rating blank. The resulting GESAMP Hazard Profile is set out below.

| A1a | A1b | A1 | A2 | B1 | B2 | C1 | C2 | C3a | C3b | C3 | D1 | D2 | D3 | E1 | E2 | E3 |
|-----|-----|-----|----|----|----|----|----|-----|-----|-----|----|----|----|----|----|----|
| (5) | (5) | (5) | NR | 1 | 0 | 0 | 0 | (0) | NI | (0) | 0 | 0 | | 3 | Fp | 2 |

EHS 2561 Methanesulphonic acid

3.13 Having considered the submission and the data provided, the Group confirmed the name of the substance as submitted and assigned a GESAMP Hazard Profile accordingly.

| A1a | A1b | A1 | A2 | B1 | B2 | C1 | C2 | C3a | C3b | C3 | D1 | D2 | D3 | E1 | E2 | E3 |
|-----|-----|----|----|----|----|----|----|-----|-----|-----|----|----|----|----|----|----|
| 0 | NI | 0 | R | 0 | 0 | 1 | 1 | (3) | NI | (3) | 3 | 3 | | 1 | D | 3 |

EHS 2562 Brassica carinata oil containing less than 3% free fatty acids

Submitted as: Brassica carinata oil

3.14 The Group considered the submission and based on the information on the composition of Brassica carinata oil provided by the submitters, the Group agreed that "Brassica carinata oil containing less than 3% free fatty acids" would be a more appropriate name for entry into the Composite List. With rapeseed and carinata being related species of the Brassicace family and the compositional documentation indicating similar fatty acid compositions of carinata and high erucic acid rapeseed oils, the Group agreed to assign a GESAMP Hazard Profile, as set out below, by read-across to "Rapeseed oil (high erucic acid; containing less than 4% free fatty acids)" (EHS 2315).

| A1a | A1b | A1 | A2 | B1 | B2 | C1 | C2 | C3a | C3b | C3 | D1 | D2 | D3 | E1 | E2 | E3 |
|-----|-----|-----|-----|-----|----|-----|-----|-----|-----|-----|-----|-----|----|----|----|----|
| (0) | NI | (0) | (R) | (2) | NI | (0) | (0) | (0) | NI | (0) | (1) | (1) | | 1 | Fp | 2 |

EHS 2563 Spent bleaching earth vegetable oil (up to 20% free fatty acids, less than 1% hexane)
Submitted as: Spent bleaching earth oil

3.15 The Group considered the information submitted on spent bleaching earth oil and noted that the request for evaluation was restricted to vegetable oils. In the regard, the Group noted that while currently the main origin of oil recovered from spent bleaching earth was palm oil, the origin could be any vegetable oil. The Group also noted that the solvent used for the extraction was hexane and that the maximum free fatty acid content for the submission was 20%.

3.16 Consequently, the Group agreed that the name "Spent bleaching earth vegetable oil (up to 20% free fatty acids, less than 1% hexane)" better distinguished the product under evaluation and would be a more appropriate name for entry into the Composite List. The Group also agreed that the scope of the entry in the Composite List would be restricted to vegetable oils that had already been assessed by GESAMP/EHS (i.e. listed in the Composite List). Any vegetable oils recovered from spent bleaching earth that did not meet this definition could not use this entry and data would need to be submitted accordingly to GESAMP/EHS. Similarly, if solvent(s) other than hexane were used for the recovery of the oils, data on the identity and residual concentration of the solvent(s) would also need to be submitted to GESAMP/EHS.

3.17 The Group assigned a GESAMP Hazard Profile, as set out below, by read-across to "Palm oil containing more than 15% and less than 30% free fatty acids" (EHS 2364).

| A1a | A1b | A1 | A2 | B1 | B2 | C1 | C2 | C3a | C3b | C3 | D1 | D2 | D3 | E1 | E2 | E3 |
|-----|-----|-----|-----|-----|----|-----|-----|-----|-----|-----|-----|-----|----|----|----|----|
| (0) | NI | (0) | (R) | (0) | NI | (0) | (0) | (2) | NI | (2) | (2) | (2) | | 1 | Fp | 2 |

EHS 2564 Spent bleaching earth vegetable oil fatty acid distillate
Submitted as: Spent bleaching earth oil fatty acid distillate

3.18 Following the evaluation of "Spent bleaching earth vegetable oil (up to 20% free fatty acids, less than 1% hexane)", the Group considered the submission for spent bleaching earth oil fatty acid distillate. The Group agreed that the name "Spent bleaching earth vegetable oil fatty acid distillate" would be more appropriate for entry into the Composite List and that the entry was restricted to fatty acid distillates derived from recovered vegetable oils that fell within the scope of "Spent bleaching earth vegetable oil (up to 20% free fatty acids, less than 1% hexane)".

3.19 Having considered whether "Vegetable oils fatty acid distillates" (EHS 2369) could cover fatty acid distillates produced from vegetable oils that had been recovered from spent bleaching earth, the Group concluded that oils recovered from waste material generated during the production of vegetable oils, as well as products produced from such recovered oils (e.g. fatty acid distillates), should have their own entries in the Composite List to differentiate them from vegetable oils produced normally (i.e. not recovered from waste material).

3.20 In this context, the Group agreed that the entry for "Spent bleaching earth vegetable oil fatty acid distillate" would be restricted to fatty acid distillates derived from EHS 2563 (see paragraph 3.16).

3.21 The Group assigned a GESAMP Hazard Profile, as set out below, by analogy to "Palm oil mill effluent fatty acid distillate" (EHS 2551).

| A1a | A1b | A1 | A2 | B1 | B2 | C1 | C2 | C3a | C3b | C3 | D1 | D2 | D3 | E1 | E2 | E3 |
|-----|-----|-----|-----|-----|----|-----|-----|-----|-----|-----|-----|-----|----|----|----|----|
| (0) | NI | (0) | (R) | (3) | NI | (0) | (0) | (2) | NI | (2) | (2) | (2) | | 1 | Fp | 2 |

EHS 2565 Quaternary ammonium compounds, benzyl-C12-18 (even-numbered)-alkyldimethyl, chlorides

3.22 Having considered the submission and the data provided, the Group confirmed the name of the substance as submitted and assigned a GESAMP Hazard Profile accordingly.

| A1a | A1b | A1 | A2 | B1 | B2 | C1 | C2 | C3a | C3b | C3 | D1 | D2 | D3 | E1 | E2 | E3 |
|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|-----|----|----|----|----|
| (3) | NI | (3) | (R) | (4) | (1) | (1) | (0) | (3) | NI | (3) | (3B) | (3) | | 1 | FD | 3 |

Refinement of column C3 (acute inhalation toxicity) and reassignment of column E1 from "Tainting of sea food" to "Flammability"

3.23 In accordance with GESAMP Hazard Evaluation Procedure for Chemicals carried by Ships, 2019 (GESAMP Reports and Studies No. 102), the Group assigned the refined ratings for acute inhalation toxicity by splitting them into C3a (vapour/mist or mist only) and C3b (vapour only). The Group also assigned flammability ratings in column E1.

3.24 In this context, the Group was informed that the Secretariat had not been able to modify the GISIS module in time to accommodate the split C3 column and the reassignment E1 column in the Composite List at the conclusion of this session. Nonetheless, the Group agreed to record the ratings in the report in order to have them included in the 2023 Composite List that would be annexed to the report of EHS 60 once the schema of the GISIS module database had been modified.

4 RE-EVALUATION OF SUBSTANCES AND CONSIDERATION OF ISSUES RELATED TO EVALUATIONS

4.1 The Group recalled that, as part of its work, it routinely considered requests for the re-assessment of products, based on the submission of new data or new scientific insights into the hazards of substances that may result in a change of a hazard profile.

4.2 The Group also recalled its ongoing review and update of the existing GESAMP/EHS files for completeness and consistency and the need for communication of any amendments relating to such matters, bringing these to the attention of the IMO (i.e. the ESPH Technical Group of the PPR Sub-Committee).

EHS 2532 Sorbitan sesquioleate

4.3 The Group considered a request for a re-evaluation of the C2 rating (acute dermal toxicity) for "Sorbitan sesquioleate". Having reviewed the information provided by the submitters, which included a justification to use extrapolation from oral toxicity, the Group amended the C2 rating as set out below, flagging that this estimated C2 rating does not take into account the potential for irritation or corrosion.

Amended rating C2= (0)

EHS 2372 Glycerol/sorbitol blend, propoxylated and ethoxylated

4.4 The Group considered a request for a re-evaluation of "Glycerol/sorbitol blend, propoxylated and ethoxylated". In this regard, the Group took into account the ratings for similar substances in the Composite list (e.g. EHS 2360, EHS 2276, EHS 2361, EHS 2529), as well as the information submitted by the manufacturer. The amended ratings are set out below.

| | | | | | |
|------------------------|---------|---------|---------|-----------|---------|
| <i>Amended ratings</i> | B2= (0) | C1= (0) | C2= (0) | C3a= (0) | C3b= NI |
| | C3= (0) | D1= (0) | D2= (0) | D3= blank | E1= 1 |
| | E2= S | E3= 0 | | | |

EHS 524 Creosote (coal tar)

4.5 The Group considered a request for a re-evaluation of the A1 and B1 ratings for "Creosote (coal tar)" EHS 524, having noted the relevant discussions during ESPH 27 on assessment of complex substances (PPR 9/3, paragraphs 2.13 and 2.14) and having recalled the clarifications provided on this matter during EHS 58 (PPR.1/Circ.11, paragraphs 7.1 to 7.8).

4.6 The Group noted that with regard to A1, industry had provided additional information with a view to having the A1 rating revised from (4) to (3) by presenting compositional information showing that the majority of polycyclic aromatic hydrocarbons (PAHs) in "Creosote (coal tar)" had log P_{ow} values corresponding to an A1a rating of 3 and that these PAHs had a higher water solubility relative to other components.

4.7 In this connection, the Group reviewed the available information in the GESAMP file for EHS 524, as well as several publicly available data sources, and noted that there was an abundance of scientific information on bioconcentration factors (BCF) for constituents of "Creosote (coal tar)". Consequently, the Group confirmed that the overall A1 rating for "Creosote (coal tar)" would be driven by the available BCF (A1b) data, which were preferred (when available) to log P_{ow} (GESAMP Reports and Studies No. 102, section 4.1.1.2).

4.8 The Group focused on three polycyclic aromatic hydrocarbons (PAHs), namely phenanthrene, pyrene and fluoranthene. The Group considered the scientific evidence from multiple publications regarding the bioaccumulation of these three PAHs present in the product that showed high bioaccumulation factors (BCF) values, as follows:

- .1 for phenanthrene, literature BCF values ranged between 700 and 71,077 L/kg depending on species and trophic level (fish, crustacean, copepod, oligochaete). The group noted test data on bioaccumulation in fish, which is the preferred trophic level according to R&S102, ranged between 700 and 6 118 L/kg, which is lower compared to the other trophic levels most probably due to higher rate of liver metabolism in fish;

- .2 for pyrene, literature BCF values ranged between 100 and 166,000 L/kg depending on species and trophic level (fish, molluscs, crustacean, oligochaete). The group noted test data on bioaccumulation in fish, which is the preferred trophic level according to R&S102, ranged between 100 and 1,297 L/kg, which is lower compared to the other trophic levels most probably due to higher rate of liver metabolism in fish; and
- .3 for fluoranthene, literature BCF values ranged between 380 and 5,920 L/kg depending on species and trophic level (fish, molluscs). The group noted test data on bioaccumulation in fish, which is the preferred trophic level according to R&S102, ranged between 380 and 2,772 L/kg, which is lower compared to molluscs most probably due to higher rate of liver metabolism in fish.

4.9 In accordance with the GESAMP/EHS rating scheme, the above-mentioned three constituents of "Creosote (coal tar)" would have ratings of A1b (and A1) = 4 (pyrene and fluoranthene) or 5 (phenanthrene). Using the compositional information available to it, the Group noted that these three PAHs are present at levels between 12.9% and 41.2% in "Creosote (coal tar)". Considering a phenanthrene concentration in the majority of the batches of "Creosote (coal tar)" between 2.5 and 25% and the presence of pyrene, and fluoranthene, the Group agreed that A1b = (4) and A1 = (4) was representative for the product using the available compositional information.

4.10 In addition, the Group noted that in several jurisdictions, the PAHs pyrene, fluoranthene, benz[k]fluoranthene, chrysene, benz[ghi]perylene, benz[a]pyrene, Benz[a]anthracene, phenanthrene and anthracene are considered as bioaccumulating or very bioaccumulating.

4.11 Having considered all of the above information, the Group concluded that for "Creosote (coal tar)" EHS 524: A1b = (4) and A1 = (4).

4.12 Additionally, industry had submitted information to support the request for a re-evaluation of the B1 rating (acute aquatic toxicity) from 4 to 3. According to the information provided by the submitters, products carried under "Creosote (coal tar)" EHS 524 cover broad boiling ranges between 210°C and 450°C due to diverging regional product specifications. Accordingly, the submitters were of the view that for this reason, determining one valid water hazard classification applicable to all bulk EHS 524 cargoes was not trivial. The Group was informed that, in contrast to 2006, industry was in a position to provide data for narrower distillation cuts within this broad boiling range. Industry had therefore produced composite samples representing the lower and higher boiling part of EHS 524, with a view to the two distillation cuts being assessed separately. The Group noted that the two distillation cuts were REACH registered in the EU as follows:

- .1 "Creosote oil acenaphthene fraction" (CAS 90640-84-9); and
- .2 "Distillates (coal tar), heavy oils" (CAS 90640-86-1).

4.13 The Group considered the assertion the submitters that studies performed with solvent resulting in E/LC50 values below 1.0 mg/L should be disregarded because complex materials such as "Creosote (coal tar)" should be tested using the Water Accommodated Fractions (WAF) procedure. Based on this, the submitters provided references to studies with crustaceans showing E/LC50 values in the 1-100 mg/L range. Following consideration, the Group agreed that studies using the WAF approach with analytical support were preferred and confirmed that, while studies in which solvents had been used to dissolve creosote (coal tar)

in the test medium may be used as part of a weight of evidence approach, studies performed using a solvent should be treated with caution.

4.14 In this regard, the Group noted that high quality studies were available in the existing file for "Creosote (coal tar)" EHS 524 that used the WAF procedure, achieving test concentrations without the use of solvents. For crustaceans, a 48h EC50 of 0.9 mg/L was reported and for algae, the 72h ErC50 was 0.9 mg/L, thus confirming acute E/LC50 values in the 0.1-10 mg/L range as originally assessed by GESAMP EHS 42. The studies referred to by industry in the newly submitted information showing EC50 values in the range of 1-100 mg/L were of variable quality. Some studies used the WAF procedure and others had been performed using a solvent without analytical determination of exposure levels. Some of the studies had been performed on only the low or high boiling point fraction of creosote (coal tar). The Group was of the view that those fractions had another chemical window and could not be used as representative for the broad scope covered by "Creosote (coal tar)" EHS 524.

4.15 Having considered the weight of evidence and having agreed to apply a reasonable worst-case approach using reliable WAF studies in the existing EHS 524 file showing E/LC50 values in the range of 0.1-1.0 mg/L, the Group concluded that the new information submitted by industry did not change the overall assessment of acute aquatic toxicity and confirmed that B1 = 4.

4.16 Having completed its review of "Creosote (coal tar)" EHS 524, which resulted in the Group confirming that A1b = (4), A1 = (4) and B1 = 4 (i.e. the GHP for EHS 524 was not changed), the Group noted that there were several products in the GESAMP Composite List that were closely related to EHS 524, namely the following:

- .1 EHS 491: coal tar pitch (molten);
- .2 EHS 499: coal tar;
- .3 EHS 500: coal tar naphtha; and
- .4 EHS 2514: creosote (coal tar) C8-C22.

4.17 The Group agreed to review the files for EHS 491, EHS 499, EHS 500 and EHS 2514, at its next session, with the aim of confirming or revising the GHPs, particularly the A1 ratings, taking into account the current state of scientific knowledge on bioaccumulation of the PAH constituents that comprise a significant fraction of these complex products and to ensure that a consistent approach is applied to all creosote (coal tar) related products.

Remaining re-evaluations from EHS 57

4.18 The Group recalled its provisional re-evaluation of "Potassium chloride (less than 26%)" (EHS 2345) and "Sodium bromide solution (less than 50%)" (EHS 2387) during EHS 57 and agreed to conduct a full re-evaluation of these substances at their next physical meeting when the existing data files were accessible to the Group.

5 CLASSIFICATION ISSUES

Estimation of acute dermal toxicity

5.1 The Group recalled that information on acute toxicity resulting from dermal exposure is sometimes lacking, a function, in part, of restriction in animal testing of corrosive substances for ethical reasons. Dermal toxicity in the absence of data for submissions considered at

EHS 58 (EHS 2545, EHS 2554, EHS 2525 and EHS 2524) and at this session (EHS 2532) was based on direct extrapolation from oral toxicity. This extrapolation was guided by the current content of Reports and Studies No.102 where it is indicated (Section 4.3.3.) that "Chemicals that are non-toxic by the oral route are generally also non-toxic by the dermal route, based on acquired experience. Similarly, orally toxic chemicals are also potentially toxic by dermal application. Data of this nature enable experts to estimate the toxic potential in the case of route-specific missing data".

5.2 As noted during EHS 58, the Group again noted that, according to the GHS and the methodology described in GESAMP Reports and Studies No. 102, corrosive or irritating properties are not reflected in the acute dermal toxicity rating in column C2.

5.3 Having recalled the discussions during the evaluation of EHS 2532 and during EHS 58 regarding the appropriateness of basing the estimation of acute dermal toxicity ratings solely on acute oral toxicity information in the absence of acute dermal toxicity test data and when the D1 and/or D2 ratings were greater than zero, the Group agreed that in such cases a note would be included in the report to flag that the C2 rating does not take into account the potential for irritation or corrosion (see paragraph 4.3).

5.4 Different viewpoints were expressed on potential future options that the Group could pursue in this context. Potential options that were mentioned during the discussions at this session included:

- .1 continuing with the practice of estimating the C2 rating based solely on acute oral toxicity information in the absence of dermal toxicity test data; and for substances where the D1 and/or D2 ratings were greater than zero, noting in the report that the C2 rating was based on oral acute toxicity and did not take into account the potential for irritation or corrosion; or
- .2 developing an extrapolation method for acute dermal toxicity in a similar fashion to the GESAMP acute inhalation toxicity extrapolation method; or
- .3 assigning "NI" for C2 in the absence of acute dermal toxicity test data and providing advice to the ESPH Technical Group on how the "NI" rating should be interpreted in combination with the C1, D1 and D2 ratings.

5.5 In this connection, the Group requested the Secretariat to compile background information on the development of PPR.1/Circ.7 and the history of the C3 extrapolation method as captured in previous EHS reports and reports of the BLG Sub-Committee and MEPC, in order to facilitate discussions at EHS 60.

5.6 The Group agreed to consider these matters further at its next and subsequent sessions. In this regard, the Group noted that if any future work on estimation of dermal toxicity significantly altered the current methodology of the Group and/or impacted the ratings of existing entries, it would keep the relevant IMO bodies (i.e. ESPH Technical Group, the PPR Sub-Committee, and MEPC) informed and seek their advice, as appropriate.

Vegetable oils used as feedstock for biofuel production

5.7 The Group recalled that at EHS 58 it had evaluated "Palm oil mill effluent oil" (EHS 2550), and that during this session it had evaluated "Brassica carinata oil containing less than 3% free fatty acids" (EHS 2562) and "Spent bleaching earth vegetable oil (up to 20% free fatty acids, less than 1% hexane)" (EHS 2563), which were all used mainly as feedstock for biofuel production according to the information reviewed by the Group.

5.8 The Group briefly considered whether it would be appropriate to develop generic entries covering groups of similar vegetable oil products, should there be an increase in the requests to evaluate vegetable oil products as a result of the expected growth in demand for biofuels and the associated shipment of feedstock oils for the production of biofuels.

5.9 In this context the Group recalled that in 2003, the Chair of GESAMP/EHS at the time had informed ESPH 9 that GESAMP would, in future, only evaluate additional vegetable oils on the basis of data provided (MEPC 71/11, paragraph 7.1.4). Therefore, to avoid considering options that could be inconsistent with previous decisions of the Group or IMO, the Group:

- .1 agreed to defer further discussions regarding whether grouping vegetable oils in the Composite List was appropriate or not until its next session; and
- .2 requested the Secretariat to compile excerpts from past reports of the GESAMP/EHS Group, MEPC, the BLG Sub-Committee and the ESPH Group, that reported on developments and decisions relating to vegetable oils, in time for EHS 60.

5.10 In this connection, the Group agreed that, should it consider it necessary to initiate work in future that could potentially change the names and/or groupings of vegetable oils in the Composite List, it would inform and seek the advice of the relevant IMO bodies (i.e. ESPH Technical Group, the PPR Sub-Committee, and MEPC), as appropriate, at an early stage.

Assessment of formulated mixtures (preparations)

5.11 The Group recalled that at EHS 58 it made observations and recommendations on how the assessment of formulated mixtures (preparations) could be facilitated (PPR.1/Circ.11, paragraphs 5.7 to 5.11, and annex 5).

5.12 As in EHS 58, the Group noted that, on a general basis, manufacturers of formulated mixtures containing unassessed components, would be advised by the Secretariat to make separate submissions for each unassessed component to GESAMP/EHS, if sufficient and appropriate data are not available for the mixture as a whole, in order for the Group to assign GESAMP Hazard Profile to each unassessed component. With all components in a mixture having a separate GESAMP Hazard Profile, a submission could be made to the ESPH Technical Group that would subsequently assess the mixture for inclusion in list 3 (trade-named mixtures) of the MEPC.2/Circular. The Group also noted that this was in line with the guidance in paragraphs 7.5 and 7.10 of MEPC.1/Circ.512/Rev.1.

List of decisions and recurring/ongoing classification issues

5.13 The Group agreed to keep an internal list of decisions, and a record of recurring or ongoing classification issues that required consideration over several sessions, with the aim of ensuring consistency and facilitating future revisions of Reports and Studies No. 102.

5.14 The Group compiled an initial record and agreed to keep it updated. The Secretariat was requested to circulate the list to the members of the Group prior to each EHS meeting.

6 CONSOLIDATION OF EXISTING DATA FILES

6.1 The Group recalled the ongoing review of the GESAMP/EHS files was a regular agenda item.

6.2 Not having had sufficient time to review these files during the session in light of other higher priority work on its agenda and given the practical limitations due to the online setting of the meeting, the Group agreed to defer consideration of this item to its next session.

7 COMMUNICATION AND PUBLICATION

7.1 The Group noted that there were no matters to consider under this agenda item.

8 ANY OTHER BUSINESS

Draft provisional agenda and date of the next session

8.1 The Group agreed to the draft provisional agenda for its next session, set out in annex 5, and that its next meeting had been tentatively scheduled to take place from 8 to 12 May 2023, at IMO headquarters in London. Subject to the aforementioned dates being confirmed, the deadline for manufacturers to submit information to GESAMP/EHS 60 would be 10 March 2023.

Membership issues

8.2 The Group agreed to reach out to their contacts with a view to recruiting a new toxicologist or ecotoxicologist to the Group in time for the next session.

9 CONSIDERATION AND ADOPTION OF THE REPORT

9.1 The Group adopted its report, noting that it would be circulated as PPR.1/Circ.12.

ANNEX 2

OUTCOMES OF ESPH 27, PPR 9 AND GESAMP 48

OUTCOMES OF ESPH 27

Evaluation of chemicals

1 ESPH 27 considered a number of products as part of its routine assessment and assignment of carriage requirements, in accordance with the IBC Code. Decisions that are relevant to GESAMP/EHS 59 are summarized below.

Classification issues

Assessment of mixtures against the new discharge requirement in regulation 13.7.1.4 of MARPOL Annex II

2 ESPH 27 considered the advice by GESAMP/EHS 58 and recalled that when the new discharge requirements in regulation 13.7.1.4 of MARPOL Annex II were being developed, it had agreed to a phased approach, with the first phase covering priority substances that ESPH had agreed should be regulated being assigned special requirement 16.2.7 in column "o" of the revised chapter 17 of the IBC Code, and a subsequent phase during which the remaining substances for which a prewash might be required could be considered subject to specific proposals being submitted to the PPR Sub-Committee or the ESPH Group with appropriate justification (PPR 5/3, paragraph 9.17).

3 The ESPH Group also recalled the advice provided by GESAMP/EHS 58 on how mixtures could be assessed against the new discharge requirement in regulation 13.7.1.4 of MARPOL Annex II. ESPH 27 noted, in particular, the view of GESAMP/EHS 58 that the ESPH Technical Group could consider adopting a threshold of 25% total concentration of components assigned special requirement 16.2.7 as an indicative cut-off value for the assessment of mixtures in the absence of detailed information on the behaviour of the product as a whole in seawater.

4 In light of the above, ESPH 27 discussed two options that it could choose between on a case-by-case basis moving forward, namely the following:

- .1 subject to sufficient data being available on a mixture as a whole (i.e. density, vapour pressure, solubility, kinematic viscosity, dynamic viscosity at 20°C and melting point) the ESPH Group could assess whether special requirement 16.2.7 should be assigned to the mixture using the data for the overall mixture; or
- .2 in the absence of sufficient information being available for the overall mixture the ESPH Group would add up the concentration of components assigned special requirement 16.2.7; and if the total concentration of such components added up to 25% or more, the ESPH Group could consider whether or not to assign special requirement 16.2.7 to the mixture.

5 Furthermore, ESPH 27 recalled the advice by GESAMP/EHS 58 that the component-based approach should be adapted on a case-by case basis by taking into account component-based knowledge, information on potential separation of a viscous floating components (e.g. phase diagrams provided by the manufacturers in addition to the information in the PPR Product Data Reporting Form) and evolving experience.

6 Some delegations expressed the view that only components that had already been assigned special requirement 16.2.7 ought to be taken into account when assessing a mixture against the discharge requirement in regulation 13.7.1.4 of MARPOL Annex II, recalling the phased approach that had been agreed to in relation to pure or technically pure products. These delegations reiterated the view that priority should be placed on reviewing the remaining pure or technically pure products in chapter 17 of the IBC Code to which special requirement 16.2.7 could be applied and assigning it as appropriate.

7 Having recalled that future consideration of the remaining products for which a prewash might be required was subject to specific proposals being submitted to the PPR Sub-Committee or the ESPH Technical Group with appropriate justification, ESPH 27 invited interested Member States and international organizations to submit proposals in that regard. The delegation of Germany informed the ESPH Group that a relevant research project had been initiated in Germany and that the results of that project could form the basis of proposals in due course.

8 In light of the above, ESPH 27 concluded that, moving forward, it would assess mixtures against the discharge requirement in regulation 13.7.1.4 of MARPOL Annex II on a case-by-case basis, taking into account the two options described in paragraph 3.85, the advice by GESAMP/EHS 58 and the views expressed at this session, with the aim of developing a consistent approach and methodology.

Estimation of acute dermal toxicity

9 ESPH 27 noted that GESAMP/EHS 58 had considered and assigned acute dermal toxicity test data to four entries based on direct extrapolation from oral toxicity, as guided by GESAMP Reports and Studies No. 102 (section 4.3.3). ESPH 27 also noted that GESAMP/EHS had agreed to discuss, at a future session, the appropriateness of estimating acute dermal toxicity ratings based solely on acute oral toxicity information.

10 In this context, the delegation of the United Kingdom sought clarification with respect to the next steps for a manufacturer whose submission to GESAMP/EHS 57 had been assigned a C1 (oral toxicity) rating but had an "NI" (no information) rating in column C2 (dermal toxicity) (i.e. "Sorbitan sesquioleate"). In response, the Secretariat informed the Group that it would consult with the GESAMP/EHS experts, with a view to providing feedback to the manufacturer as to what additional test data, if any, would be required in the case of "Sorbitan sesquioleate" (EHS 2532).

Assessment of complex substances - Creosote (coal tar)

11 During discussions at ESPH 27, the observer from CEFIC recalled that when ESPH 26 had agreed to include "Creosote (coal tar) (amended)" in list 1 of MEPC.2/Circ.26, with validity for all countries and with an expiry date of 31 December 2023, it had also agreed that data should be provided to the GESAMP/EHS Working Group at the earliest opportunity and had invited CEFIC to keep the Group informed about the progress regarding the re-evaluation of the product. In this regard, the observer from CEFIC informed the Group that GESAMP/EHS 58 had received and considered comments submitted by CEFIC concerning some differences between GESAMP Reports and Studies No.102 and the 7th edition of the Globally Harmonized System of Classification and Labelling of Chemicals (GHS) in relation to the evaluation of mixtures. The Group noted that GESAMP/EHS 58 had provided relevant clarifications (PPR.1/Circ.11, paragraphs 7.1 to 7.8) and also noted that industry was preparing an updated report on "Creosote (coal tar)" (EHS 524), with a view to submitting the information to GESAMP/EHS 59.

12 ESPH 27 expressed its appreciation for the update and invited CEFIC to keep the Group informed of developments regarding the potential re-evaluation of "Creosote (coal tar)" by GESAMP/EHS.

OUTCOME OF PPR 9

13 PPR 9 considered the report of ESPH 27 (document PPR 9/3). With regard to products in lists 2 or 3 of the MEPC.2 circular, which upon re-evaluation by the ESPH Group had been deemed as meeting the criteria for complex mixtures in paragraph 9.2 of MEPC.1/Circ.512/Rev.1 and would therefore be deleted from the MEPC.2 circular in order to be shipped instead as MARPOL Annex I cargoes (e.g. the cargoes reported by Belgium in document ESPH 27/6), one delegation expressed the view that such reclassifications should be communicated in a formal and official manner. To that end, it was proposed that:

- .1 a new annex should be introduced in the MEPC.2 circular, listing products previously assessed as MARPOL Annex II cargoes but subsequently re-assessed and deemed to be MARPOL Annex I cargoes; and
- .2 in the period between the publication of the MEPC.2 circular in December of one year and the publication of the next edition in December of the following year, a running list of reassessed products should be maintained and posted on the IMO website.

14 The Chair of the ESPH Technical Group recalled that ESPH 27, having considered various options for disseminating information on the products which upon re-assessment had been deemed to meet the criteria in paragraph 9.2 of MEPC.1/Circ.512/Rev.1 and were therefore to be shipped as MARPOL Annex I cargoes, had acknowledged that more time was necessary to give due consideration to the potential consequences of any proposals in that regard; had agreed to consider the matter further at future sessions; and had encouraged interested Member States and international organizations to submit relevant proposals to assist the Group in its deliberations. Accordingly, the Sub-Committee noted that ESPH 28 would report the outcome of any relevant deliberations to PPR 10.

OUTCOME OF GESAMP 48

15 The Joint Group of Experts on the Scientific Aspects of Marine Environmental Protection (GESAMP) held its 48th session from 6 to 10 September 2021, by virtual means. GESAMP was established in 1969 by a number of United Nations' Organizations as a Joint Group to encourage the independent, interdisciplinary consideration of marine pollution and environmental protection issues, with a view to avoiding duplication of efforts within the United Nations system. The main topics considered at this session are described below.

Evaluation of the hazards of harmful substances carried by ships (WG 1)

16 WG 1 met once since GESAMP 47 via a combination of correspondence and virtual plenary sessions due to the COVID-19 restrictions. Data on 13 new substances were evaluated and full GESAMP Hazard Profiles (GHPs) were assigned to all substances. The

Group also considered requests for the re-assessment of three substances for which new ratings were assigned.

Review of applications for "active substances" to be used in ballast water management systems (WG 34)

17 WG 34 convened once since GESAMP 47 to evaluate four Ballast Water Management Systems (BWMS). GESAMP noted that the number of BWMS presented to the Working Group had increased, and that it could be expected that more BWMS will have to be evaluated for freshwater, since several existing BWMS have received only Final Approval for marine and brackish water.

Atmospheric input of chemicals to the ocean (WG 38)

18 The Working Group had held a virtual workshop on the atmospheric transport of microplastics to and from the ocean which took place in cooperation with Working Group 40 in November 2020. Furthermore, a workshop on ocean management and policy implications of air/sea exchange of chemicals was being developed to examine the potential role of atmospheric deposition in driving ocean productivity in the Mozambique Channel and the Southwest Indian Ocean. The Working Group had also finalized the manuscript for its next report, titled "The changing acidity of the global atmosphere and ocean and its impact on air/sea chemical exchange".

Sources, fate and effects of plastics and microplastics in the marine environment (WG 40)

19 GESAMP approved the workplan and TOR for the fourth phase of the Working Group, which aims to develop a risk assessment framework to promote a risk-based approach to assessing the social, economic and ecological impacts of all types and sizes of marine plastic litter and guide the design of cost-effective response options.

Ocean interventions for climate change mitigation (WG 41)

20 GESAMP noted the progress with the second phase of the Working Group, including its support to the Scientific Groups under the London Convention//Protocol and the LC/LP Contracting Parties. GESAMP re-iterated the common interests between the WG and the UNFCCC processes, and requested the Lead Agencies to follow up with the UNFCCC secretariat intersessionally.

Impacts of wastes and other matter in the marine environment from mining operations, including marine mineral mining (WG 42)

21 GESAMP noted that following internal and external peer-review, the final report of the Working Group was currently being reviewed by the Lead Agencies (IMO, UNEP and ISA). GESAMP welcomed the renewed engagement by ISA, and in light of this the Group noted the importance of the current final review and the need to update the report before publication. In addition, the UNEP Extractions Group had provided additional comments, which would be considered prior to publication.

Sea-based sources of marine litter (WG 43)

22 GESAMP noted that since GESAMP 47, the Working Group had met twice by teleconference and had finalized the technical report, which had now undergone internal and external peer-review and was in the final stages of publication. A webinar was scheduled on

23 September 2021 to present the report's main conclusions. GESAMP also noted the interest from the co-sponsors (FAO, IMO, UNEP) to continue the work of WG 43 through a second phase and that the Chair would engage with the co-sponsors to review the TOR and work plan.

Biofouling management (WG 44)

23 GESAMP noted that the WG had held its first meeting (by virtual means) in October 2020 and that it was working towards completion of its first report in September 2021. To facilitate work during the pandemic, several drafting groups had been established. GESAMP also noted that the Chair of the WG had resigned, and that the Lead Organization of the WG (IOC-UNESCO) would identify a new WG Chair, in consultation with the Chair and Vice-Chairs of GESAMP.

Climate change and greenhouse gas related impacts on contaminants in the ocean (WG 45)

24 GESAMP noted that the WG had held two meetings since its establishment earlier in 2021. To facilitate its work, the WG had formed and defined four thematic sub-groups to work towards the compilation and synthesis of information and the identification of knowledge gaps.

Contribution to other UN processes

25 GESAMP noted the postponement of many ocean related UN processes due to the pandemic but reiterated its readiness to support the Sponsoring Organizations as and when required. GESAMP also highlighted the need to strengthen the ocean-related issues in the climate change dialogues, and once again noted the importance of its working groups in this context, WG 38, WG 41 and WG 45.

The United Nations Decade of Ocean Science for Sustainable Development

26 GESAMP noted that the work of GESAMP will be of great relevance to the Decade for many years to come, and agreed to strengthen its efforts with respect to the Decade by establishing a permanent Task Team, once the Terms of Reference would be developed and approved intersessionally.

Scoping activities

27 GESAMP considered the progress of its Correspondence Groups that had been developing scoping papers in the intersessional period, including: 1) Causes and impacts of massive accumulations of the brown macro-algae Sargassum in the nearshore environment of the Caribbean and West Africa; 2) Relevance of inputs of disinfection by-products (DBPs) into the marine environment; 3) Sand and gravel mining in the marine environment: new insights on an growing environmental problem; 4) Update the information on sources of the main pollutants impacting the global marine environment ('The 80:20 conundrum'); and 5) Impact of armed conflicts on the marine environment and sustainable development.

Identification of new and emerging issues

28 GESAMP discussed a number of new and emerging issues, including 1) the use of CO₂ scrubbers in reducing carbon output related to shipping of cargo, 2) energy transition, decarbonisation, related to the H₂ economy and the transport of NH₃, and 3) artificial light and noise, and agreed to continue consideration intersessionally, as relevant. GESAMP also welcomed the suggestion by the ISA to convene a webinar on artificial light and noise in relation to deep sea mining, and agreed to continue the consideration of establishing a

mechanism to provide the Sponsoring Organizations with support in relation to emergency response.

GESAMP side-event

29 During the annual session, GESAMP organized a side-event, together with the IAEA as the host of the session, on "Marine contamination incidents: scientific support to emergency response", which was held as an open (virtual) seminar.

ANNEX 3

GESAMP HAZARD PROFILES FOR NEW SUBSTANCES SUBMITTED FOR EVALUATION TO GESAMP/EHS 59

1 This annex sets out the GESAMP Hazard Profiles (GHP) assigned for the products submitted to the current session. The respective substances and their GHPs are summarized in the subsequent table.

ANNEX 3 - GESAMP HAZARD PROFILES FOR NEW SUBSTANCES SUBMITTED FOR EVALUATION TO GESAMP/EHS 59

30 June 2022

ANNEX 4

UPDATED GESAMP/EHS COMPOSITE LIST

Notes:

- 1 In the Composite List, both EHS and TRN (shipping) names are shown for each product. The alphabetical listing of the products is based on the EHS names.
- 2 Any changes introduced in the table since the last issue of the Composite List are highlighted.
- 3 Entries with an EHS name marked with a single asterisk (*) represent cleaning additive components that have only a partial hazard profile assigned. These profiles **cannot be used** for mixture calculations in relation to bulk shipments.
- 4 Entries with an EHS name marked with a double asterisk (**) represent mixture components for which only a partial hazard profile has been assigned. These profiles **may be used** for mixture calculations in relation to bulk shipments.
- 5 Entries with an EHS name marked with a hash mark (#) reflect that for the **C3 rating**, the product, as a vapour rather than an aerosol or mist, could be considered to have a lower inhalation hazard for the purposes of risk management.
- 6 Entries with an EHS name marked with an exclamation mark (!) refer to a mixture that contains components with substantially different physical properties and therefore different physical behaviours when released in the marine environment. The **E2 rating** assigned reflects the most severe impact from an environmental standpoint. For example, a mixture assigned a rating of Fp may also have a major component(s) with sinker characteristics (S) or dissolver characteristics (D).

ANNEX 5

PROVISIONAL AGENDA FOR THE SIXTIETH SESSION OF THE GESAMP/EHS WORKING GROUP

- 1 Adoption of the agenda
 - 2 Outcome of other bodies
 - 3 Evaluation of new substances
 - 4 Re-evaluation of substances and consideration of issues related to evaluations
 - 5 Classification issues
 - 6 Consolidation of existing data files
 - 7 Communication and publication
 - 8 Any other business
 - 9 Consideration and adoption of the report
-
